manufacture and refining of raw cane sugar provides an operating manual to the workers in cane raw sugar factories and refineries while there are many excellent reference and text books written by prominent authors there is none that tell briefly to the superintendent of fabrication the best and simplest procedures in sugar production this book is not meant to replace existing books treating sugar production but rather to supplement them all that is written in this book each chapter of which deals with a separate station in a raw sugar factory and refinery is also based on material already published and known to many in the sugar industry the book is organized into two parts part i covers raw sugar and includes chapters on the harvesting and transportation of sugar cane to the factory washing of sugar cane and juice extraction

weighing of cane juice boiling of raw sugar massecuites and storing and shipping bulk sugar part ii on refining deals with processes such as clarification and treatment of refinery melt filtration and drying cooling conditioning and bulk handling of refined sugar

introduction to cane sugar technology provides a concise introduction to sugar technology more specifically cane sugar technology up to the production of raw sugar being intended originally for use in a post graduate university course the book assumes a knowledge of elementary chemical engineering as well as adequate knowledge of chemistry in the field of sugar manufacture itself the object of the book is to place more emphasis on aspects which are not adequately covered elsewhere in accordance with this objective attention has been concentrated mainly on processes and operation of the factory and description of equipment is made as brief as possible with numerous references to other books where more detail is available the emphasis on operation rather than equipment has also been prompted by observation of quite a few factories in different countries where good equipment is giving less than its proper performance due to inefficient operation and supervision the book is confined to the raw sugar process which has been the author's main interest refining is discussed only to the extent required to explain refiners requirements concerning quality of raw sugar

unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy
