how can a long metal needle pass through a balloon without popping it how can water  
flow at very different rates through two identical funnels how can a stick placed on a  
table under several sheets of newspaper and extended over the edge of a table snap  
when quickly struck without lifting or tearing the paper author thomas o brien takes  
these and 30 more science inquiry activities to a higher level in this book for educators

who love to surprise and challenge their students with unanticipated results using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect o brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations what makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity each discrepant event is shown to be analogous to a pedagogical principle speaking directly to teachers o brien writes your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning at the same time you will develop expertise with activities that you can use with your own students the dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning the detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike this thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and chemistry activities bringing the total number of inquiry activities to nearly 120 most important the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students

earthquakes volcanoes and tsunamis don t happen every day so how can budding scientists study how they work through experiments models and demonstrations this in depth resource will teach readers how to build a seismograph to record a simulated earthquake compare pressure waves and shear waves the two types of ground shocks using a slinky and replicate a tsunami s destructive effect on a coastline built in a bathtub authors matthys levy and mario salvadori even discuss issues of modern architecture and civil engineering how science can be used to protect buildings and

property in earthquake prone areas earthquakes volcanoes and tsunamis answers a wide array of questions about these phenomena can animals predict earthquakes how have various cultures explained the movement of the earth throughout history what is the richter scale and what does it tell us about the strength of a quake and most important readers will learn how to earthquake proof their homes and how to protect themselves should they experience a tremor

electrifying mobility realising a sustainable future for the car considers the drivers barriers to adoption and the current lived experience of electric vehicles drawing upon this experience to inform planning for mass adoption and how regulation might change to reflect the specific needs and challenges raised
