this book is the first systematic study of policy analysis activities in Spain. It provides a comprehensive overview of how policy actors, including politicians, think tanks, researchers, interest groups, and experts, generate information for the policy-making process. The book explores how executive and legislative actors participate in the production of policy analysis and how all actors elaborate and disseminate information on policy analysis. Contributors consider the ways different policy actors are involved in the production of data and information about policy problems, the resources used to produce policy analysis, and the type of analysis produced over time in different policy areas.

This book focuses on two key ways to improve the literature surrounding policy analysis. Firstly, it explores the implications of new developments in policy process research on the role of psychology in communication and the multi-centric nature of policymaking. This is particularly important since policy analysts engage with policymakers who operate in an environment over which they have limited understanding and even less control. Secondly, it incorporates insights from studies of power co-production, feminism, and decolonisation to redraw the boundaries of policy-relevant knowledge. These insights help raise new questions and change expectations about the role and impact of policy analysis.

Policy analysts currently have available to them a cafeteria menu of analytical approaches from welfare economics to political philosophy. Davis B. Bobrow and John S. Dryzek believe that now more than ever, a clear understanding of the approaches available, the assumptions consciously or unconsciously adopted by their practitioners, is crucial to the practice of intellectually defensible and socially responsible analysis of public policy. *Policy Analysis by Design* examines the approaches to public policy taken by those who try to teach it, write about it, and influence it through major analysis. Bobrow and Dryzek systematically compare the five major contending analytical frames of reference: welfare economics, public choice, social structure, information processing, and political philosophy. The workings of each frame are illustrated by means of a common, if imaginary, policy case: air pollution in the hypothetical Smoke Valley. Bobrow and Dryzek discover that many important distinctions emerge among the major frames of reference, differences which should help to determine when to choose what approach. The authors conclude by suggesting how policy analysis should be conducted and how policy analysts should be trained in the face of such diversity. The concerns of *Policy Analysis by Design* are deeper and broader than most books in the field. Breaking new ground, Bobrow and Dryzek make the case that policy analysts should balance their attention to technique with an understanding of the rationales underlying their interventions in policy processes. *Policy Analysis by Design*, based on this fundamental principle, should stimulate debate about basic choices that policy analysts must make.
