convective heat transfer presents an effective approach to teaching convective heat transfer the authors systematically develop the topics and present them from basic

principles they emphasize physical insight problem solving and the derivation of basic equations to help students master the subject matter they discuss the implementations of the basic equations and the workings of examples in detail the material also includes carefully prepared problems at the end of each chapter in this second edition topics have been carefully chosen and the entire book has been reorganized for the best presentation of the subject matter new property tables are included and the authors dedicate an entire chapter to empirical correlations for a wide range of applications of single phase convection the book is excellent for helping students quickly develop a solid understanding of convective heat transfer

this book entitled plasma based synthesis and modification of nanomaterials is a collection of nine original research articles devoted to the application of different atmospheric pressure apps and low pressure lpps plasmas for the synthesis or modification of various nanomaterials nms of exceptional properties these articles also show the structural and morphological characterization of the synthesized nms and their further interesting and unique applications in different areas of science and technology the readers interested in the capabilities of plasma based treatments will quickly be convinced that apps and lpps enable one to efficiently synthesize or modify differentiated nms using a minimal number of operations indeed the presented procedures are eco friendly and usually involve single step processes thus considerably lowering labor investment and costs as a result the production of new nms and their functionalization is more straightforward and can be carried out on a much larger scale compared to other methods and procedures involving complex chemical treatments and processes the size and morphology as well as the structural and optical properties of the resulting nms are tunable and tailorable in addition to the desirable and reproducible physical dimensions crystallinity functionality and spectral properties of the resultant nms the nms fabricated and or modified with the aid of apps are commonly ready to use prior to their specific applications without any initial pre treatments
