this textbook offers an introduction to multiple interdependent transport phenomena as they occur in various fields of physics and technology like transport of momentum heat and matter these phenomena are found in a number of combined processes in the fields of chemical food biomedical and environmental sciences the book puts a special emphasis on numerical modeling of both purely diffusive mechanisms and macroscopic transport such as fluid dynamics heat and mass convection to favor the applicability of the various concepts they are presented with a simplicity of exposure and synthesis has been preferred with respect to

completeness the book includes more than 130 graphs and figures to facilitate the understanding of the various topics it also presents many modeling examples throughout the text to control that the learned material is properly understood there are some typos in the text you can see the corrections here [springer.com/cda/content/document/cda/download/document/errata/corrige\\_v0.pdf](http://springer.com/cda/content/document/cda/download/document/errata/corrige_v0.pdf) sgwid 0 0 45 1679320 p181107156

young engineers are often required to utilize commercial finite element software without having had a course on finite element theory that can lead to computer aided design errors this book outlines the basic theory with a minimum of mathematics and how its phases are structured within a typical software the importance of estimating a solution or verifying the results by other means is emphasized and illustrated the book also demonstrates the common processes for utilizing the typical graphical icon interfaces in commercial codes in particular the book uses and covers the widely utilized solidworks solid modeling and simulation system to demonstrate applications in heat transfer stress analysis vibrations buckling and other fields the book with its detailed applications will appeal to upper level undergraduates as well as engineers new to industry

direct chill casting is the major production route for wrought aluminium and magnesium alloys that are later deformed rolled extruded forged to the final products to aid in this process this book provides comprehensive coverage on topics such as the history of process development in this field industrial applications including vertical and horizontal casting melt preparation fundamentals of solidification in dc casting and more the first book targeted for the industrial researcher and practitioner it pulls together the practice and process of physics with the goal of improving process performance

this marvelous volume takes the reader on a journey across the centuries as it explores eponymous physical laws from archimedes law of buoyancy and kepler s laws of planetary motion to heisenberg s uncertainty principle and hubble s law of cosmic expansion whose ramifications have profoundly altered our everyday lives and our understanding of the universe

proceedings of spie present the original research papers presented at spie conferences and other high quality conferences in the broad ranging fields of optics and photonics these books provide prompt access to the latest innovations in research and

technology in their respective fields proceedings of spie are among the most cited references in patent literature

hyperthermia has been found to be of great benefit in combination with radiation therapy or chemotherapy in the management of patients with difficult and complicated tumor problems it has been demonstrated to increase the efficacy of ionising radiation when used locally but also has been of help in combination with systemic chemotherapy where hyperthermia is carried out to the total body problems remain with regard to maximizing the effects of hyperthermia as influenced by blood flow heat loss etc the present volume defines the current knowledge relative to hyperthermia with radiation therapy and or chemotherapy giving a comprehensive overview of its use in cancer management philadelphia hamburg june 1995 l w brady h p heilmann preface in an attempt to overcome tumor resistance hypoxia or unfavorable tumor conditions oncological research has come to focus on gene therapy immunotherapy new cytotoxic agents and increasingly sophisticated radiotherapy radiation research has been directed towards heavy particle therapy and modification of the radiation response by either protecting or sensitizing agents improved dose localization using rotational or conformal strategies has also been implemented recently changes in radiation fractionation schedules have shown promise of better results hyperthermia in cancer therapy can be viewed similarly as another means to increase the sensitivity of tumors to radio and chemotherapy
