the waters of the indo pacific were at the centre of the global expansion of marine capture fisheries in the twentieth century yet surprisingly little has been written about this subject from a historical perspective this book the first major study of the history of fishing in asia and oceania presents the case studies completed through the history of marine animal populations hmap initiative it examines the marine environmental history and historical marine ecology of the indo pacific during a period that witnessed the dramatic escalation of industrial fishing in these seas

the book aims to further the debate on the impacts of fisheries policies in the indian ocean region in order to facilitate a new regional policy direction a key argument of the volume is that ecologically sustainable and socially just development and management of indian ocean fisheries require a paradigm shift in the perceptions and policies of major stakeholders a central policy challenge is to identify a collective regional interest for fisheries and accordingly the development of integrated management policies that link ecology and society and which incorporate individuals communities agencies states and regimes into a holistic cooperative endeavour successful ocean governance therefore requires greater inter state and inter agency consultation and cooperation an improvement in linking national initiatives to local action increased participation of local government and local communities and the enhancement of local capability in order to achieve this overall goal requires either the enhancement of existing regional institutions or the creation of a new regional body institute of southeast asian studies singapore and indian ocean research group iorg co publication iseas has worldwide distribution rights

developing countries have traditionally been highly dependent on their natural resources for conversion into capital for consumption and development purposes there is however a limit to which some natural resources notably biotic renewable resources can be exploited as over exploitation can lead to collapse and in the case of wildlife extinction this study

focuses on the problems of exploiting an open access renewable resource the sea fisheries of peninsular malaysia it traces the history of fisheries development in that country and shows how open access to a rich resource can rapidly lead to overfishing and serious stock depletion the various efforts of managing the fisheries are also discussed

among the fishes a remarkably wide range of biological adaptations to diverse habitats has evolved as well as living in the conventional habitats of lakes ponds rivers rock pools and the open sea fish have solved the problems of life in deserts in the deep sea in the cold antarctic and in warm waters of high alkalinity or of low oxygen along with these adaptations we find the most impressive specializations of morphology physiology and behaviour for example we can marvel at the high speed swimming of the marlins sailfish and warm blooded tunas air breathing in catfish and lungfish parental care in the mouth brooding cichlids and viviparity in many sharks and toothcarps moreover fish are of considerable importance to the survival of the human species in the form of nutritious delicious and diverse food rational exploitation and management of our global stocks of fishes must rely upon a detailed and precise insight of their biology the chapman hall fish and fisheries series aims to present timely volumes reviewing important aspects of fish biology most volumes will be of interest to research workers in biology zoology ecology and physiology but an additional aim is for the books to be accessible to a wide spectrum of non specialist readers ranging from undergraduates and postgraduates to those with an interest in industrial and commercial aspects of fish and fisheries

seven of top ten marine fisheries consist 30 of world s fish catch are fully or over exploited according to the report of environmental justice foundation each year about 10 million tons of bycatch are taken by shrimp trawlers it is also estimated about 150 000 sea turtles are killed annually by prawn trawlers subsidies given by governments for the careful utilization of ocean resources has reached 15 30 billion every year marine stewardship council has certified 12 fisheries for sustainable management this book reviews the causes of over exploitation of coastal and marine resources including coral reefs estuaries mangroves sea grass beds open oceans and polar seas and conservation of coastal resources towards sustainable fisheries as driven by international action plan over the past 50 years international trade of raw materials and manufactured products has increased dramatically according to recent estimates world economy uses around 60 billion tonnes of resources annually to produce the goods and services people in rich countries consumes up to 10 times more natural resources than those in poor countries and more resources are

extracted from developing countries african continent is with the highest resource intensity with countries needing almost 7 kg of domestic resources to produce one dollar of gdp wwf 2008 report reveals as per calculations of ecological footprint world is already using around 30 more bio capacity than the global ecosystems can provide in a sustainable manner many fish stocks deplete forests get shrunk fertile lands get degrade and increased carbon emission causes global climatic changes entails with natural disaster events this part reviews seri and global 2000 2009 report along with other available resources on the same this comprehensive handbook analyzes global fishing production disposition and import trade and strategies for indian exporters
