first published in 1992 waste location seeks to widen and integrate the debate on the intrinsically spatial nature of waste disposal the political and industrial significance of the new environmentalism of the 1980s came from the recognition of growing public pressure for environmental quality and product reliability attention was turned to waste as the product of consumption as the political economy of waste was explored new issues were raised new technologies recycling pollution havens waste minimization location of landfill sites and incinerator facilities and environmental crime responsibility and planning the 1990s sees the advocates of cradle to grave responsibility still battling the promoters of market forces one of the major developments in the study of waste collection and disposal was the new forms of data collection and handling technology the contributors consider both geotechnics and geographical information systems within this context the focus on the geography of the uk is set within the broader framework of political economy and the international trade in pollution exports the case studies presented range from bin analysis through a bayesian perspective on risk to the global politics of international waste streams together the contributors provide a comprehensive overview of the waste location debate in the early 1990s students of environment and climate change will find this book particularly enlightening

this research deals with the increasingly complex issues of waste generation waste management and waste disposal that in less developed industrialised countries present diverse but critical concerns it takes a socio economic and policy oriented perspective and provides empirical evidence at eu and regional level the eu and italy are taken as relevant case studies given the disparities in environmental performances between less and more developed areas the rich and various empirical evidence shows that a robust delinking between waste generation and economic growth is still not present thus future policies should directly address the problem at the source by targeting waste generation in eu countries some structural factors like population density and urbanisation present themselves as relevant drivers of both waste management and landfill diversion nevertheless economic and structural factors alone are not sufficient to improve waste performances though waste policies are to be redesigned by covering the entire area of waste management some first signals of policy effectiveness are arising this work will be of most interest to those students of environmental economics and environmental sciences as well as policy makers waste utility managers and companies in the waste management sector

this book covers the latest in recycling and reuse research focused toward greater sustainability and includes chapters authored by the world s leading thinkers and practitioners in the field topics covered include recycling and reuse solid waste management renewable energy environmental studies and wastewater management this text contains environmental issues with an experimental focus making this a useful resource to students researchers and professionals working in solid waste management energy and water sustainability issues within the geoscience engineering and chemistry fields

this fourth edition of organic waste recycling is fully updated with new material to create a comprehensive and accessible textbook new chapter on constructed wetlands for wastewater and faecal sludge stabilization new sections on waste recycling vs climate change and water faecal sludge and its characteristics hydrothermal carbonization technology up to date environmental criteria and legislation and environmental risk assessment new case studies with emphasis on practices in both developed and developing

countries have been included along with more exercises at the end of chapters to help the readers understand the technical principles and their application novel concepts and strategies of waste management are presented up to date research findings and innovative technologies of waste recycling program are provided this textbook is intended for undergraduate and graduate students majoring in environmental sciences and engineering as well as researchers professionals and policy makers who conduct research and practices in the related fields it is essential reading for experts in environmental science and engineering and sustainable waste reuse and recycling in both developed and developing countries

this edited book includes more than four hundred short papers that were presented during the fourth edition of emcei which was held in sousse tunisia in november 2022 by presenting a wide range of environmental topics and new findings relevant to a variety of problems in the mediterranean region and its surroundings the book addresses emerging environmental issues along with new challenges by focusing on innovative approaches that contribute to achieving a sustainable environment in these regions the book appeals to anyone working in the subject area and especially students interested in learning more about new developments in environmental research initiatives in light of the worsening environmental degradation of the mediterranean and surrounding areas making environmental and resource protection an increasingly important issue that impedes sustainable development and social well being the book addresses emerging environmental issues along with new challenges by focusing on innovative approaches that contribute to achieving a sustainable environment in and around the mediterranean sea and by highlighting to decision makers from relevant sectors the environmental considerations that should be integrated into their own activities

this book provides insights into the current status of waste management in india and research approaches to minimize waste and convert useful waste into energy alternatives towards achieving environmental sustainability it also discusses the implications of waste on human health and approaches to minimize the burden waste disposal especially municipal solid waste msw is one of the major environmental problems facing indian cities inadequate management of msw poses risks to inhabitants and is also a breeding

ground for various diseases environmental health and the impact of waste on health is another major topic that has to be addressed in india non governmental organizations ngos and social welfare groups play a major role in collecting and managing waste however waste management is still a huge problem and has also expanded into rural areas contributed research papers from academic studies and industry focus on applied waste management methods currently being practiced waste strategies and ecofriendly approaches such as bioremediation the outcomes of the research contributions in the book will be useful in implementing and developing a task force to combat the waste management and energy demand crises
