understanding physics second edition is a comprehensive yet compact introductory physics textbook aimed at physics undergraduates and also at engineers and other scientists taking a general physics course written with today's students in mind this text covers the core material required by an introductory course in a clear and refreshing way a second colour is used throughout to enhance learning and understanding each topic is introduced from first principles so that the text is suitable for students without a prior background in physics at the same time the book is designed to enable students to proceed easily to subsequent courses in physics and may be used to support such courses mathematical methods in particular calculus and vector analysis are introduced within the text as the need arises and are presented in the context of the physical problems which they are used to analyse particular aims of the book are to demonstrate to students that the easiest most concise and least ambiguous way to express and describe phenomena in physics is by using the language of mathematics and that at this level the total amount of mathematics required is neither large nor particularly demanding modern physics topics relativity and quantum mechanics are introduced at an earlier stage than is usually found in introductory textbooks and are integrated with

the more classical material from which they have evolved this book encourages students to develop an intuition for relativistic and quantum concepts at as early a stage as is practicable the text takes a reflective approach towards the scientific method at all stages and in keeping with the title of the text emphasis is placed on understanding of and insight into the material presented

the critical analysis of science textbooks is vital in improving teaching and learning at all levels in the subject and this volume sets out a range of academic perspectives on how that analysis should be done each chapter focuses on an aspect of science textbook appraisal with coverage of everything from theoretical and philosophical underpinnings methodological issues and conceptual frameworks for critical analysis to practical techniques for evaluation contributions from many of the most distinguished scholars in the field give this collection its sure footed contemporary relevance reflecting the international standards of unesco as well as leading research organizations such as the american association for the advancement of science whose project 2061 is an influential waypoint in developing protocols for textbook analysis thus the book shows how to gauge aspects of textbooks such as their treatment of controversial issues graphical depictions scientific historiography vocabulary usage accuracy and readability the content also covers broader social themes such as the portrayal of women and minorities despite newer more active pedagogies textbooks continue to have a strong presence in classrooms and to embody students socio historical inheritance in science despite their ubiquitous presence they have received relatively little on going empirical study it is imperative that we understand how textbooks influence science learning this book presents a welcome and much needed analysis tina a grotzer harvard university cambridge massachusetts usa the present book provides a much needed survey of the current state of research into science textbooks and offers a widerange of perspectives to inform the science of writing better science textbooks keith s taber university of cambridge cambridge united kingdom bringing together international research on nature of science nos representations in science

textbooks the unique analyses presented in this volume provides a global perspective on nos from elementary to college level and discusses the practical implications in various regions across the globe contributing authors highlight the similarities and differences in nos representations and provide recommendations for future science textbooks this comprehensive analysis is a definitive reference work for the field of science education
