this book is the first monograph that takes a comprehensive approach to jacques derrida as a philosopher of technology it refines and complements his mainstream image as a philosopher of language and deconstructionist of classical literary and philosophical texts this volume outlines the key features of derrida s alternative philosophy of technology a philosophy which sj strand argues avoids the problems associated with on the one hand a heideggerian orientation which completely separates thinking and technology and on the other an empirically oriented post phenomenology that can be said to be hegemonic within the field today based on a sustained interpretation of derrida and a robust coherent philosophy of technology a phenomenology of technology is developed that in a radical way extends the concept of technology to cover the entire field of phenomenology this places the technological not in opposition to humanity but rather always already in close proximity to man and consequently to life ethics politics democracy and religion strikingly this important aspect of derrida s thinking is only rarely analyzed or discussed by his many exegetes this text appeals to graduates and researchers working on derrida phenomenology and the philosophy of technology
