following the trails of hawaiian snails to explore the simultaneously biological and cultural significance of extinction in this time of extinctions the humble snail rarely gets a mention and yet snails are disappearing faster than any other species in a world in a shell thom van dooren offers a collection of snail stories from hawaiian once home to more than 750 species of land snails almost two thirds of which are now gone following snail trails through forests laboratories museums and even a military training facility and meeting with scientists and native hawaiians van dooren explores ongoing processes of ecological and cultural loss as they are woven through with possibilities for hope care mourning and resilience van dooren recounts the fascinating history of snail decline in the hawaiian islands from deforestation for agriculture timber and more through the

nineteenth century shell collecting mania of missionary settlers and on to the contemporary impacts of introduced predators along the way he asks how both snail loss and conservation efforts have been tangled up with larger processes of colonization militarization and globalization these snail stories provide a potent window into ongoing global process of environmental and cultural change including the largely unnoticed disappearance of countless snails insects and other less charismatic species ultimately van dooren seeks to cultivate a sense of wonder and appreciation for our damaged planet revealing the world of possibilities and relationships that lies coiled within a snail s shell

use this series of resource books to help children master the basic concepts they are expected to know by the end of kindergarten the content is research based and in alignment with emerging kindergarten standards a correlation chart is featured at the beginning of each title that links all the activities to the standards as an added feature each book includes 12 sheets of perforated flashcards that reinforce or extend the related activities

this comprehensive handbook on economic entomology for australian field crops and pastures is the first of its kind it encompasses pests and beneficial insects as well as allied forms of importance in australian agriculture organised by commodities such as cereals sugar and tropical pasture legumes it examines all the pest species for a particular commodity across australia identification distribution damage host range biology risk period and monitoring techniques are described for each entry accompanied by useful illustrations the book also describes introduced biological control agents that effectively control crop pests pests of field crops and pastures will be a useful tool in crop management for progressive farmers agronomists agricultural consultants and academics alike
