when we learn new and complex materials our cognitive processing capabilities are usually severely reduced due to limited working memory capacity learner expertise in a specific domain decreases those limitations by enabling the use of the expert's organised knowledge base in many instructional situations however expertise may also trigger additional cognitive load because of the processing of redundant information recently strong evidence has emerged that instructional techniques which are highly effective with novice learners can lose their effectiveness and even have negative consequences when used with advanced learners as learners become more knowledgeable in a domain instructional techniques and procedures often need to change radically in order to remain efficient to tailor instruction to levels of learner knowledge in computer based learning environments it is critical to have a simple and rapid measure of learner expertise suitable for real time testing research based recommendations on instructional techniques and diagnostic assessment methods that are suitable for advanced learners in multimedia learning environments
