this book discusses the strategic shift in ownership of aramco the saudi arabian oil company and its potential impact on aramco s role in a post privatized world scheduled to become an ipo in 2018 aramco is on the verge of becoming the largest ipo on the market as the world s

largest oil and gas company aramco's impending privatization has important implications for the world's petroleum market. This book therefore undertakes an analysis of aramco, examining its history, its current role in Saudi Arabia's economy, and its future role as an IPO. The chapters highlight the likely outcomes for aramco in proceeding with its planned IPO and privatization, as well as the various policy options and models available to it by drawing on the privatization of other national oil companies in Norway, Russia, Brazil, and China. The book also explores the complexities that will be involved in transforming Saudi Aramco to a privatized company, albeit with significant government oversight and control, and addresses key questions on the issues likely to be faced, such as IPO pricing, the listing domain, and market capacity, and potential stakeholders. As such, this book will be of interest to academic researchers studying energy economics, energy policy, and the political economy of the Middle East, as well as private sector decision makers in energy-related fields, international organizations, international oil companies, energy commodity traders, and public sector energy policy makers with interest in Saudi Arabia and aramco's IPO.

Since the advent of Markov chain Monte Carlo (MCMC) methods in the early 1990s, Bayesian methods have been proposed for a large and growing number of applications. One of the main advantages of Bayesian inference is the ability to deal with many different sources of uncertainty, including data, models, parameters, and parameter restriction uncertainties, in a unified and coherent framework. This book contributes to this literature by collecting a set of carefully evaluated contributions that are grouped amongst two topics in financial economics. The first three papers refer to macro finance issues for real economy, including the elasticity of factor substitution,  $\epsilon$ s in the Cobb-Douglas production function, the effects of government public spending, components, and quantitative easing monetary policy, and economics. The last three contributions focus on cryptocurrency and stock market predictability. All arguments are central ingredients in the current economic discussion, and their importance has only been further emphasized by the COVID-19 crisis.
