in june 1970 a diverse group of scientists attended the international symposium on the biology of the sipuncula and echiura at the marine biological station in kotor yugoslavia forty two years later in june 2012 an aspiring generation of like minded scientists convened the second international symposium on the biology of the sipuncula isbs2 along the banks of the fort pierce inlet to the indian river lagoon in florida usa the primary objective of the second

symposium was to collect the world's dedicated sipunculan biologists in one place for a long overdue face to face communication of past present and future research we met our objective this proceedings volume includes a brief summary of workshop discussions and field events and a compilation of selected research papers presented by an international group of sixteen scientists from twelve nations in attendance at the isbs2 herein we highlight molecular developmental morphological ecological and biogeographic diversity of adult and larval sipunculans and we introduce several of the outstanding research challenges associated with resolving sipunculan interrelationships establishing standard sets of taxonomic characters refining methods for identification of cryptic species reconstructing an evolutionary framework of developmental life history patterns and addressing implications of recent phylogenetic and phylogenomic hypotheses that have relocated the ancient radiation of unsegmented sipunculan body plans within the predominantly segmented annelida provided by publisher

if darwin were alive today he would likely recognize that technology has evolved so far and so fast that the origin evolution and future of life itself is no longer just driven by natural selection and random mutation why are genetic conditions like autism asthma and allergies on the rise at unprecedented biologically impossible speeds what traits does our world select for and what does that mean for us will our children be a different species today's humans have altered the nature of our world so much and developed such profound capabilities for re-crafting our bodies and environment that random mutation and natural selection are no longer the primary determinants of which species survives and how they change over time the nature of the evolution of our world is now increasingly defined and driven by un-natural selection where the traits being selected for have little to nothing to do with our ability to survive and thrive and non-random mutation in which drastic changes to our environment wreak havoc on what genes are expressed and passed down evolving ourselves is the story of how our massive human perturbation and increasingly our specific designs and desires are altering life on earth it is a

chronicle of where our remarkable new capabilities for altering our bodies other living creatures and our environment are taking us in the near term and introduces the possibility that we might cause our own extinction in the long run
