The theory of concurrent engineering is based on the concept that the different phases of a product lifecycle should be conducted concurrently and initiated as early as possible within the product creation process. Concurrent engineering is important in many industries including automotive, aerospace, shipbuilding, consumer goods and environmental engineering as well as in the development of new services and service support. This book presents the proceedings of the 21st ISPE Inc International Conference on Concurrent Engineering held at Beijing Jiaotong University, China in September 2014. It is the first volume of a new book series, *Advances in Transdisciplinary Engineering*. The title of the CE2014 conference is "Moving Integrated Product Development to Service Clouds in the Global Economy" which reflects the variety of processes and methods which influence modern product creation. After an initial first section presenting the keynote papers, the remainder of the book is divided into 11 further sections with peer-reviewed papers. Product lifecycle management (PLM), knowledge-based engineering (KBE), cloud approaches, 3D printing applications, design methods, educational methods and achievements, simulation of complex systems, systems engineering, services as innovation and science, sustainability and recent research on open innovation in concurrent engineering. The book will be of interest to CE researchers, practitioners from industry and public bodies and educators alike.

A comprehensive introduction to manufacturing process planning in the context of the latest techniques being used in industry. Manufacturing process planning is a comprehensive guide to the intricacies of the manufacturing planning process that leads readers through each stage of planning while providing practical examples that illustrate the manufacturing activities taking place at every juncture. Beginning with the fundamentals, the book bridges the gap between technical documents and product specifications and how the information they contain can be effectively applied on the shop floor. The book focuses around four key areas: selection of manufacturing processes, process planning in sand casting, process planning in machining, and process planning in inspection. Each chapter highlights best practices for activities such as casting mold design, machining sequence identification, geometrical validation, CNC programming, the preparation of inspection reports, and more. Special attention is paid to manufacturing cost estimation and pricing, ensuring that the production process is not only feasible but also cost effective. To enhance the learning experience, the book comes complete with an active learning project brief and tutorial sessions covering casting simulation, pattern design, and CNC simulation using freely available software. Manufacturing process planning includes information on fundamentals of casting, including heating the metal, pouring the molten metal, solidification and cooling, determining casting quality, and performing cleaning operations. Definition and selection of workholding systems, covering principles of workholding, types of workholding systems, and general purpose of workholding devices for turning and milling machine, and cutting tool selection, and process parameter selection, covering specific guidelines in turning, milling, and drilling. Documents for process planning, including process flow charts, routing sheets, and operation and tooling lists, providing a hands-on approach to mastering the principles of manufacturing process planning. Manufacturing process planning is an ideal resource for undergraduate and graduate academic courses that incorporate a lab component, as well as production planning supervisors and managers looking to hone their knowledge base.

About this book: This book is a detailed introduction to programming with the OSF Motif interface. It is an introduction in that it does not require the reader to have experience programming in the X window environment. It is detailed in that it teaches you

how to use the interface components provided by motif in a complex application although it contains a great deal of reference material it is not meant as an authoritative reference that is the job of the osf motif programmer s reference which uses over 900 pages in the process instead this book provides its reference material in a practical how to manner and allows the reader to use the programmer s reference effectively the target reader is an experienced c programmer and user of the x window system under the unix operating system the reader should be familiar with the tools provided by unix for the compilation and testing of programs while this book does examine the process by which a motif program is compiled it does not explain that process it also assumes that the reader is familiar with x terms such as pointer and display
