let us then consider for a moment the world as described by the physicist it consists of a number of fundamental particles which appear bound by certain natural laws which indicate the form of their relationship now the physicist himself who describes all this is in his own account himself constructed of it he is in short made of a conglomeration of the very particulars he describes no more no less bound together by and obeying such general laws as he himself has managed to find and to record thus we cannot escape the fact that the world we know is constructed in order and thus in such a way as to be able to see itself this is indeed amazing not so much in view of what it sees although this may appear fantastic enough but in respect of the fact that it can see at all but in order to do so evidently it must first cut itself up into at least one state which sees and at least one other state which is seen in this severed and mutilated condition what ever sees is only partially itself we may take it that the world undoubtedly is itself i e is indistinct from itself but in any attempt to see itself as an object it must equally undoubtedly act so as to make itself distinct from and therefore false to itself in this condition it will always partially elude itself

the papers comprising this second volume of human behavior and the environment represent as do their predecessors a cross section of current work in the broad area of problems dealing with interrelationships between the physical environment and human behavior at both the individual and the aggregate levels considering the two volumes as a unit we have included papers covering a broad spectrum of problems ranging from the theoretical to the applied and from the disciplinary based to the interdisciplinary and professional approximately half of the papers are written by psychologists with the remainder coming in part from such other disciplines as sociology geography and from such diverse applied and professional fields as natural recreation landscape architecture urban planning and operations research the volumes thus provide an overview of work on current topical problems yet as the field is developing specialization is inevitably increasing apace and the editors as well as the publisher have become convinced of the desirability for future volumes in this series to be organized along topical lines with successive volumes devoted to different aspects of this rather sprawling field thus volume 3 currently in the planning stage will be devoted exclusively to the interaction of children with the physical environment considered from diverse viewpoints again including authors from diverse fields of specialization
