this book explores the shared qualities of mountains as naturally formed landscapes and of  
megastructures as manmade landscapes seeking to unravel how each can be understood as an  
open system of complex network relationships human natural and artificial by looking at  
mountains and megastructures in an interchangeable way the book negotiates the fixed  
boundaries of natural and artificial worlds to suggest a more complex relationship between  
landscape and architecture it suggests an ecological understanding of the interconnectedness  
of architecture and landscape and an entangled network of relations urban colonialist fictional  
rural and historical landscapes are interwoven into this fabric that also involves discontinuities  
tensions and conflicts as parts of a system that is never linear but rather fluid and organic as

driven by human endeavor

amsterdamse bos bois de boulognes epping forest hong kong s country parks stanley park throughout history cities across the world have developed close relationships with nearby woodland areas in some cases cities have even developed and in some cases are promoting a distinct forest identity this book introduces the rich heritage of these city forests as cultural landscapes and shows that cities and forests can be mutually beneficial essential reading for students and researchers interested in urban sustainability and urban forestry this book also has much wider appeal for with city forests playing an increasingly important role in local government sustainability programs it provides an important reference for those involved in urban planning and decision making public affairs and administration and even public health from providers of livelihoods to healthy recreational environments and from places of inspiration and learning to a source of conflict the book presents examples of city forests from around the world these cases clearly illustrate how the social and cultural development of towns and forests has often gone hand in hand they also reveal how better understanding of city forests as distinct cultural and social phenomena can help to strengthen synergies both between cities and forests and between urban society and nature

it is becoming clear that the mediterranean region is one of the hottest of the biodiversity hotspots on the planet there is also an increasing concern for the conservation adaptive management and restoration of the unique natural ecosystems and cultural landscapes that characterize this area the region s biological and cultural heritage as well as its huge wealth of biodiversity is now at real risk this brings a further urgency to the task of communicating detailed but readily accessible information on the mediterranean biota and an ecological historical and evolutionary perspective to the changing contexts in which the region s flora and fauna continue to evolve there is no other recent textbook devoted solely to mediterranean evolutionary ecology and a synthesis of the many recent advances is now overdue this new work builds on the success and reputation of the first edition although the text has been updated and expanded to document recent changes to biodiversity new ecological and evolutionary insights and the challenges for the future these changes include the addition of two new chapters devoted to the mediterranean sea itself and especially the coastal areas throughout the book the pressing issues of global change especially climate warming are addressed in conjunction with changing land use and in terms of their potential impact on biota communities ecosystems and landscapes
