recipient of the Jo Anne Stolaroff Cotsen Prize. Scholars from Aristotle to Marx and beyond have been fascinated by the question of what constitutes value. The construction of value in the ancient world makes a significant contribution to this ongoing inquiry. Bringing together in one comprehensive volume the perspectives of leading anthropologists, archaeologists, historians, linguists, philologists, and sociologists on how value was created, defined, and expressed in a number of ancient societies around the world, based on the basic premise that value is a social construct defined by the cultural context in which it is situated, the volume explores four overarching but closely interrelated themes: place value, body value, object value, and number value. The questions raised and addressed are of central importance to archaeologists studying ancient civilizations: how can we understand the value that might have been accorded to materials, objects, people, places, and patterns of action by those who produced or used the things that compose the human material record? Taken as a whole, the contributions to this volume demonstrate how the concept of value lies at the intersection of individual and collective tastes, desires, sentiments, and attitudes that inform the ways people select or give priority to one thing over another.

Big History is a new field on a grand scale. It tells the story of the universe over time through a diverse range of disciplines that spans cosmology, physics, chemistry, astronomy, geology, evolutionary biology, anthropology, and archaeology, thereby reconciling traditional human history with environmental geography and natural history. Weaving the myriad threads of evidence-based human knowledge into a master narrative that stretches from the beginning of the universe to the present, the Big History framework helps students make sense of their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them. Teaching Big History is a powerful analytic and pedagogical resource and serves as a comprehensive guide for teaching Big History as well for sharing ideas about the subject and planning a curriculum around it. Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around Big History. The book includes teaching materials, examples, and detailed sample exercises. This book is also an engaging first-hand account of how a group of professors built an entire Big History general education curriculum for first-year students, demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning this incredible story can be transformative for professors and students alike.

Offers a comprehensive framework that can assist in responding to new justice challenges for people on the move.
