charles darwin changed the course of scientific thinking by showing how evolution accounts for the stunning diversity and biological complexity of life on earth recently there has also been increased interest in the social sciences in how darwinian theory can explain human culture covering a wide range of topics including fads public policy the spread of religion and herd behavior in markets alex mesoudi shows that human culture is itself an evolutionary process that exhibits the key darwinian mechanisms of variation competition and inheritance this cross disciplinary volume focuses on the ways cultural phenomena can be studied scientifically from theoretical modeling to lab experiments archaeological fieldwork to ethnographic studies and shows how apparently disparate methods can complement one another to the mutual benefit of the various social science disciplines along the way the book reveals how new insights arise from looking at culture from an evolutionary angle cultural evolution provides a thought provoking argument that darwinian evolutionary theory can both unify different branches of inquiry and enhance understanding of human behavior

how our collective intelligence has helped us to evolve and prosper humans are a puzzling species on the one hand we struggle to survive on our own in the wild often failing to overcome even basic challenges like obtaining food building shelters or avoiding predators on the other

hand human groups have produced ingenious technologies sophisticated languages and complex institutions that have permitted us to successfully expand into a vast range of diverse environments what has enabled us to dominate the globe more than any other species while remaining virtually helpless as lone individuals this book shows that the secret of our success lies not in our innate intelligence but in our collective brains on the ability of human groups to socially interconnect and learn from one another over generations drawing insights from lost european explorers clever chimpanzees mobile hunter gatherers neuroscientific findings ancient bones and the human genome joseph henrich demonstrates how our collective brains have propelled our species genetic evolution and shaped our biology our early capacities for learning from others produced many cultural innovations such as fire cooking water containers plant knowledge and projectile weapons which in turn drove the expansion of our brains and altered our physiology anatomy and psychology in crucial ways later on some collective brains generated and recombined powerful concepts such as the lever wheel screw and writing while also creating the institutions that continue to alter our motivations and perceptions henrich shows how our genetics and biology are inextricably interwoven with cultural evolution and how culture gene interactions launched our species on an extraordinary evolutionary trajectory tracking clues from our ancient past to the present the secret of our success explores how the evolution of both our cultural and social natures produce a collective intelligence that explains both our species immense success and the origins of human uniqueness

oxford presents in one convenient and coherently organized volume 20 influential but until now relatively inaccessible articles that form the backbone of boyd and richerson s path breaking work on evolution and culture their interdisciplinary research is based on two notions first that culture is crucial for understanding human behavior unlike other organisms socially transmitted beliefs attitudes and values heavily influence our behavior secondly culture is part of biology the

capacity to acquire and transmit culture is a derived component of human psychology and the contents of culture are deeply intertwined with our biology culture then is a pool of information stored in the brains of the population that gets transmitted from one brain to another by social learning processes therefore culture can account for both our outstanding ecological success as well as the maladaptations that characterize much of human behavior the interest in this collection will span anthropology psychology economics philosophy and political science
