this book explores the shared qualities of mountains as naturally formed landscapes and of megastructures as manmade landscapes seeking to unravel how each can be understood as an open system of complex network relationships human natural and artificial by looking at mountains and megastructures in an interchangeable way the book negotiates the fixed boundaries of natural and artificial worlds to suggest a more complex relationship between landscape and architecture it suggests an ecological understanding of the interconnectedness of architecture and landscape and an entangled network of relations urban colonialist fictional rural and historical landscapes are interwoven into this fabric that also

involves discontinuities tensions and conflicts as parts of a system that is never linear but rather fluid and organic as driven by human endeavor

amsterdamse bos bois de boulognes epping forest hong kong s country parks stanley park throughout history cities across the world have developed close relationships with nearby woodland areas in some cases cities have even developed and in some cases are promoting a distinct forest identity this book introduces the rich heritage of these city forests as cultural landscapes and shows that cities and forests can be mutually beneficial essential reading for students and researchers interested in urban sustainability and urban forestry this book also has much wider appeal for with city forests playing an increasingly important role in local government sustainability programs it provides an important reference for those involved in urban planning and decision making public affairs and administration and even public health from providers of livelihoods to healthy recreational environments and from places of inspiration and learning to a source of conflict the book presents examples of city forests from around the world these cases clearly illustrate how the social and cultural development of towns and forests has often gone hand in hand they also reveal how better understanding of city forests as distinct cultural and social phenomena can help to strengthen synergies both between cities and forests and between urban society and nature

it is becoming clear that the mediterranean region is one of the hottest of the biodiversity hotspots on the planet there is also an increasing concern for the conservation adaptive management and restoration of the unique natural ecosystems and cultural landscapes that characterize this area the region s biological and cultural heritage as well as its huge wealth of biodiversity is now at real risk this brings a further urgency to the task of communicating detailed but readily accessible information on the mediterranean biota and an ecological historical and evolutionary perspective to the changing contexts in which the region s flora and fauna continue to evolve there is no other recent textbook devoted solely to mediterranean evolutionary ecology and a synthesis of the many recent advances is now overdue this new work builds on the success and reputation of the first edition although the text has been updated and expanded to document recent changes to biodiversity new ecological and evolutionary insights and the challenges for the future these changes include the addition of two new chapters devoted to the mediterranean sea itself and especially the coastal areas throughout the book the pressing issues of global change especially climate warming are addressed in conjunction with changing land use and in terms of their potential impact on biota communities ecosystems and landscapes

these essays trace the evolution of british geography as an academic discipline during the last hundred years and stress how the study of the world we live in is

fundamental to an understanding of its problems and concerns never before has such an ambitious and wide ranging review been attempted and never before has it been done with so much knowledge and passion the principal themes covered in this volume are those of environment place and space and the applied geography of map making and planning the volume also addresses specific issues such as disease urbanization regional viability and ethics and social problems this lively and accessible work offers many insights into the minds and practices of today's geographers

now in its fourth edition rediscovering the golden state california geography examines this unique state's incredibly diverse landscapes and how geography and geographic change influences everything from the state's natural systems and cycles to its agriculture and more advanced industries to human migration cultures and urban planning exploring california through a geographic lens reveals how the field has evolved to cross traditional boundaries connect local and global issues and provide the insights that lead to practical solutions to problems new and old challenging the reader to look beyond stereotypes and assumptions this book encourages active participation in planning the state's dynamic future and this project makes teaching and learning about the geography of california more convenient exciting and rewarding for instructors and students going beyond a scientific analysis of natural features and environmental processes this book illustrates how social political and economic divides can be bridged through the study of geography and the connections it brings to light from geology weather and climate biogeography and hydrology we cover the state's physical geography and from demography and migration to cultures and economies to rural and urban geography we monitor the state's human geography pulse and then make the vital connections california continues to lead the nation in population economics 5th largest in the world agriculture natural and cultural diversity and a host of other categories this powerful state has earned this powerful publication this timely and versatile book will prove useful to californians in business education government and to concerned citizens and curious readers seeking to learn more about the golden state

a comprehensive overview of the geomorphological processes that shape rivers and that should be considered in river management
