this innovative volume evaluates the theories methods approaches and history of mesopotamian archaeology from its origins in the 19th century up the to present day

paleobiology struggled for decades to influence our understanding of evolution and the history of life because it was stymied by a focus on microevolution and an incredibly patchy fossil record but in the 1970s the field took a radical turn as paleobiologists began to investigate processes that could only be recognized in the fossil record across larger scales of time and space that turn led to a new wave of macroevolutionary investigations novel insights into the evolution of species and a growing prominence for the field

among the biological sciences in the quality of the archaeological record charles perreault shows that archaeology not only faces a parallel problem but may also find a model in the rise of paleobiology for a shift in the science and theory of the field to get there he proposes a more macroscale approach to making sense of the archaeological record an approach that reveals patterns and processes not visible within the span of a human lifetime but rather across an observation window thousands of years long and thousands of kilometers wide just as with the fossil record the archaeological record has the scope necessary to detect macroscale cultural phenomena because it can provide samples that are large enough to cancel out the noise generated by micro scale events by recalibrating their research to the quality of the archaeological record and developing a true macroarchaeology program perreault argues archaeologists can finally unleash the full contributive value of their discipline

the encyclopedia of historical archaeology is a ground breaking compendium of information about this ever growing field concentrating on the post 1400 period as well as containing generic explanations of historical archaeology where needed the encyclopedia is compiled by over 120 experts from around the world and contains more than 370 entries covering important concepts and sites

the purpose of this collection is to make research more alive for students like you who are just beginning to get to know archaeology this text focuses on the way archaeologists find and recover data from archaeological sites and materials the text tries to convey a feeling for the research process but is focused on a particular issue or controversy rather than a method it illustrates how they applied archaeological methods to particular cases of interest to them from the origins of complex polities in sub saharan africa to gender roles in the inka empire it also includes two autobiographical articles in the text the editors hope you will come to appreciate that archaeology is not just an unemotional set of methods and data but rather a bunch of hard working insightful people who employ those methods to answer particular questions about the past
