neural engineering is a discipline that uses engineering techniques to understand repair replace enhance or treat diseases of neural systems currently no book other than this one covers this broad range of topics within motor rehabilitation technology with a focus on cutting edge technology it describes state of the art methods within this field from brain computer interfaces to spinal and cortical plasticity touching on electrode design signal processing the neurophysiology of movement robotics and much more this innovative volume collects the latest information for a wide range of readers working in biomedical engineering

this book provides a comprehensive overview of the current state of the art of practical applications of neuroprosthesis based on functional electrical stimulation for restoration of motor functions lost by spinal cord injury and discusses the use of brain computer interfaces for their control the book covers numerous topics starting with basics about spinal cord injury electrical stimulation electrical brain signals and brain computer interfaces it continues with an overview of neuroprosthetic solutions for different purposes and non invasive and invasive brain computer interface implementations and presents clinical use cases and practical applications of bcis finally the authors give an outlook on cutting edge research with a high potential for clinical translation in the near future all authors committed themselves to use easy to understand language and to avoid very specific information focusing instead on the essential aspects this makes this book an ideal choice not only for researchers and clinicians at all stages of their

education interested in the topic of brain computer interface controlled neuroprostheses but also for end users and their caregivers who want to inform themselves about the current technological possibilities to improve paralyzed motor functions

this volume of progress in brain research follows on from the 32nd international symposium of the groupe de recherche sur le système nerveux central grsnc may 2010 and aims to provide an overview of the various neural mechanisms that contribute to learning new motor and sensory skills and to adapting to changed circumstances including the use of devices and implants to substitute for lost sensory or motor abilities brain machine interfaces the focus is on recent developments covering five major themes mechanisms to improve motor performance neuro rehabilitation of motor function mechanisms to enhance sensory perception cross modal interaction for enhancing sensorimotor performance assistive technologies to enhance sensorimotor performance this volume focuses on the translation of scientific knowledge into applications and strategies that can help restore lost function following injury or disease including assistive neuroprosthetic technologies to enhance sensorimotor performance and neurorehabilitation leading authors review the state of the art in their field of investigation and provide their views and perspectives for future research chapters are extensively referenced to provide readers with a comprehensive list of resources on the topics covered all chapters include comprehensive background information and are written in a clear form that is also accessible to the non specialist
