this book addresses daily choices we can make to restore preserve and ultimately respect the great seas back cover

a counterintuitive and compelling argument that existing laws already protect the entirety of our oceans and a call to understand and enforce those protections the world's oceans face multiple threats the effects of climate change pollution overfishing plastic waste and more confronted with the immensity of these challenges and of the oceans themselves we might wonder what more can be done to stop their decline and better protect the sea and marine life such widespread environmental threats call for a simple but significant shift in reasoning to bring about long overdue elemental change in the way we use ocean resources in future sea ocean advocate and marine policy researcher deborah rowan wright provides the tools for that shift questioning the underlying philosophy of established ocean conservation approaches rowan wright lays out a radical alternative a bold and far reaching strategy of 100 percent ocean protection that would put an end to destructive industrial activities better safeguard marine biodiversity and enable ocean wildlife to return and thrive along coasts and in seas around the globe future sea is essentially concerned with the solutions and not the problems rowan wright shines a light on existing international laws intended to keep marine environments safe that could underpin this new strategy she gathers inspiring stories of communities and countries using ocean resources wisely as well as of successful conservation projects to build up a cautiously optimistic picture of the future for our oceans counteracting all too prevalent reports of doom and gloom a passionate sweeping and personal account future sea not only argues for systemic change in how we manage what we do in the sea but also describes steps that anyone from children to political leaders or indeed any reader of the book can take toward safeguarding the oceans and their extraordinary wildlife

we've all seen the news of dead and dying whales and the alarming amounts of plastic pollution washing up on beaches or floating on

the tides the oceans are in very great danger for many reasons and it is not just plastic waste which is bad enough overfishing acidification coral bleaching nuclear waste seabed mining military testing and climate change are taking a very heavy toll on marine creatures of all types from tiny plankton to the massive whales the eponymous dead zones are aptly named many marine creatures are in danger of extinction life on this planet depends on healthy oceans we depend on healthy oceans this book takes a look at the threats to marine life and what is being done to save the seas it is a call to action to save mother ocean the author explains how he became personally motivated to do what he could as a singer and songwriter he wrote songs and came up with the idea for ocean aid concerts now he has written the book you are holding he hopes to inspire you to think about what you can do we all need to help save the seas

rather than continue to focus on discrete geographically bounded bodies of water ocean advocate and marine policy researcher deborah wright urges a plan sea which reimagines the oceans as the continuous ecosystem it is not disconnected buckets of salt and plankton this book proposes that the global marine environment be protected under the precautionary principle it argues that the policy framework for such protection already exists it just needs to be enforced in a series of case studies with first person vignettes woven throughout wright encourages us to begin every conversation about ocean policy with the assumption that any extractive or polluting activities in the world's oceans should require special permission her argument invokes the public trust doctrine already embedded in many constitutions and hinges on the law of the sea which was established by the u n in 1982 to protect the high seas or the remote parts of the ocean considered international waters to some wright's plan may seem idealistic but its audacity might also be seen as a welcome nudge to our collective imagination many scientists are convinced that ocean ecosystems are on the brink of collapse there's something to be said then for a book that's radical enough to unlock new thinking about what might be possible and maybe necessary in terms of their protection

exciting adventurous educational and captivating bethany stahl's stories express heartfelt messages while engaging readers with beautiful illustrations as well as lovable characters this is a book everyone will love reading over and over again save the ocean has a

lesson of recycling and conservation

nestled in the pine barrens of southern new jersey whitesbog was established by james fenwick in 1857 as a cranberry farm during the 1890s whitesbog became the largest cranberry operation in the united states in 1911 elizabeth white worked to to domesticate the highbush blueberry making whitesbog the official birthplace of the blueberry industry into the 1960s whitesbog was more than just a multigenerational family farm and site of innovation it was a year round community complex with housing a post office and even a school back cover

a passionate environmental call to arms documents the author s 1997 short cut voyage through the seldom traversed north pacific subtropical gyre where he discovered the planet s largest garbage dump and resolved to raise awareness about the toxic impact of plastic waste in the world s oceans
