the concept of design has been defined in a multitude of ways and used in a variety of academic fields ranging from the classics of organizational and system design to studies on corporate culture aesthetics and consumption however in mainstream organization and management studies the concept of design has been black boxed and easily implied as an updated and more fashionable version of the traditional idea of structuring organizational processes at the same time working and organizing seem to be embedded nowadays in increasingly complex and situated technologies and practices if the spreading of information and communication technologies icts has changed workplaces and even the very meaning of workplace as an area marked by the physical presence of different human actors working and organizing mobilizes the joint action of humans technologies and knowledges the aim of the book is thus to discuss the relations among technologies work and organisations from multiple theoretical perspectives and to engage with questions about design as well as the sociomaterial foundations of working and organising the book focuses on the close study of practices and processes that inextricably link work and organisation to the use of artefacts and technological systems and vice versa exploring by means of different cases of organizational and design research articulations and disarticulations of daily work and design the doing of objects and technologies in everyday organizational life the reconstruction of organizational processes through technological and design practices the relation between learning innovations and technologies in organizational settings the book is addressed to graduate students phds scholars and researchers interested in the fields of organization studies science and technology studies sociology and design as well as to professionals and practitioners interested in new methodological approaches towards the relations between technology work and organization

design technology to address the new and vast problem of heterogeneous embedded systems design while remaining compatible with standard more moore flows i e capable of simultaneously handling both silicon complexity and system complexity represents one of the most important challenges facing the semiconductor industry today and will be for several years to come while the micro electronics industry over the years and with its spectacular and unique evolution has built its own specific design methods to focus mainly on the management of complexity through the establishment of abstraction levels the emergence of device heterogeneity requires new approaches enabling the

satisfactory design of physically heterogeneous embedded systems for the widespread deployment of such systems heterogeneous embedded systems compiled largely from a set of contributions from participants of past editions of the winter school on heterogeneous embedded systems design technology fetch proposes a necessarily broad and holistic overview of design techniques used to tackle the various facets of heterogeneity in terms of technology and opportunities at the physical level signal representations and different abstraction levels architectures and components based on hardware and software in all the main phases of design modeling validation with multiple models of computation synthesis and optimization it concentrates on the specific issues at the interfaces and is divided into two main parts the first part examines mainly theoretical issues and focuses on the modeling validation and design techniques themselves the second part illustrates the use of these methods in various design contexts at the forefront of new technology and architectural developments
