this book contains technical papers presented in a discussion session at the xi international conference on soil mechanics and foundation engineering held in san francisco in 1985 on the role of centrifuge in geotechnical testing with descriptions of test facilities

the workshop aims to provide a fundamental understanding of the liquefaction process necessary to the enhancement of liquefaction prediction the contributions are divided into eight sections which include factors affecting liquefaction susceptibility and field studies of liquefaction

an excellent source of reference on the current practice of physical modelling in geotechnics and environmental engineering volume one concentrates on physical modelling facilities and experimental techniques soil characterisation slopes dams liquefaction ground improvement and reinforcement offshore foundations and anchors and pipelines v

this book is served as a reference text to meet the needs of advanced scientists and research engineers who seek for their own computational fluid dynamics cfd skills to solve a variety of fluid flow problems key features flow modeling in sedimentation tank greenhouse environment hypersonic aerodynamics cooling systems design photochemical reaction engineering atmospheric reentry problem fluid structure interaction fsi atomization hydraulic component design air conditioning system industrial applications of cfd

this report describes the completion of a new major centrifuge based earthquake simulation facility and a series of model tests that were conducted using the facility the model tests used centrifuge modeling to investigate remediation of liquefaction at a bridge site the tests were designed to help evaluate the extent of soil improvement required to mitigate the consequences of liquefaction

methods for improving ground and soil have undergone significant developments in recent years particularly in terms of application and usage and many innovative techniques have been introduced however it is of significance that in many areas the design process still lacks a theoretical framework the papers included in this volume written by international authors deal with a cross section of problems faced by many practising engineers and provide advice and guidance on how these problems can be dealt with in a practical manner
