students build on the foundational concepts as presented in grades k 8 expanding their understanding through other mathematical experiences geometric thinking and spatial reasoning play a critical role in geometry geometric figures provide ways to represent mathematical situations and to express generalizations about space and spatial relationships students use geometric thinking to understand mathematical concepts and the relationships among them geometry consists of the study of geometric figures of zero one two and three dimensions and the relationships among them students study properties and relationships having to do with size shape location direction and orientation of these figures geometry can be used to model and represent many mathematical and real world situations students perceive the connection between geometry and the real and mathematical worlds and use geometric ideas relationships and properties to solve problems students use concrete pictorial numerical symbolic graphical and verbal tools and technology to solve meaningful problems by representing and transforming figures and analyzing relationships this course applies a connection integration and applications approach students will relate and apply geometric concepts to algebra statistics data analysis and probability a connection is made to other courses such as biology history art etc with problems that involve many of the geometric concepts and encourage the use of technology

not so long ago about 30 years ago not only the world community of mathematicians but other scientific communities and even non scientific communities with close attention some with partiality some without partiality but followed with interest and even delved into scientific details of the proof of the russian mathematician grigory perelman of the

hypothesis that was formulated in 1904 by the outstanding french mathematician henri poincaré i was also interested in the same evidence true the reason for my interest was not so much perelman s proofs in their mathematical details but rather the formulation of the hypothesis itself which seemed to me an extremely interesting formulation of the problem of such manifolds the topological and metric properties of which in their unity with each other are the cause of the geometric shape of the space of the universe if someone asks why start the same scientific business if there is already a mathematical proof of the same hypothesis firstly if anything determines the geometric shape of any space including the space of the universe then perhaps its physical content if so then from the standpoint of the spatial unity of the geometric form of the space of the universe and the physical content of the same geometric form poincaré s mathematical hypothesis is certainly a theoretically incomplete hypothesis all the same justifies the need for the science of physical and geometric science in their unity with themselves and among themselves to prove those manifolds physical and geometric manifolds the natural properties of which in their unity with each other are responsible for the spatial unity of the universe with itself secondly since truth is not an absolute truth it reveals itself each time as a relative truth which does not prohibit but permits another proof of the same mathematical hypothesis which in a given place is no longer mathematical but geometrically physical and physically geometric
