the field of perception is devoted to explaining the operation of the senses and the experiences and behaviors resulting from stimulation of the senses perceptual processes such as recognizing faces seeing color hearing music and feeling pain represent the actions of complex mechanisms yet we usually do them easily the encyclopedia of perception presents a comprehensive overview of the field of perception through authoritative essays written by leading researchers and theoreticians in psychology the cognitive sciences neuroscience and medical disciplines it presents two parallel and interacting approaches the psychophysical or determining the relationship between stimuli in the environment and perception and the physiological or locating the biological systems responsible for perception are there any processes not associated with perception surely there are but the pervasiveness of perception is truly impressive and the phenomena of perception and its mechanisms are what this encyclopedia is about key features contains 16 pages of color illustration and photography to accompany the entries offers a varied and broad list of topics including basic research as well as methodologies theoretical approaches and real world applications of perceptual research emphasizes human perception but includes ample research because of its importance in its own right and because of what this research tells us about human perception written by recognized experts from many disciplines but for an audience with no previous background in perception students and members of the general public alike key themes action attention audition chemical senses cognition and perception computers and perception consciousness disorders of perception illusory perceptions individual differences human and comparative across species not including ageing disorders and perceptual development methods perceptual development experience philosophical approaches physiological processes sense interaction skin and body senses theoretical approaches visual perception

in a major contribution to the theory of perception a d smith presents a truly original defense of direct realism the view that in perception we are directly aware of things in a physical world it offers two arguments against direct realism one concerning illusion and one concerning hallucination that upto now no theory of perception could adequately rebut at the heart of smiths theory is a new way of drawing the distinction between perception and sensation alone with an unusual treatment of the nature of object of hallucination

the aim of the present work is to show the roots of the conception of perception as an active process tracing the history of its development from plato to modern philosophy the contributors inquire into what activity is taken to mean in different theories challenging traditional historical accounts of perception that stress the passivity of percipients in coming to know the external world special attention is paid to the psychological and physiological mechanisms of perception rational and non rational

perception and the role of awareness in the perceptual process perception has often been conceived as a process in which the passive aspects such as the reception of sensory stimuli were stressed and the active ones overlooked however during recent decades research in cognitive science and philosophy of mind has emphasized the activity of the subject in the process of sense perception often associating this activity to the notions of attention and intentionality although it is recognized that there are ancient roots to the view that perception is fundamentally active the history remains largely unexplored the book is directed to all those interested in contemporary debates in the fields of philosophy of mind and cognitive psychology who would like to become acquainted with the historical background of active perception but for historical reliability the aim is to make no compromises
