during the past forty years a new trend in the theory of associative algebras lie algebras and their representations has formed under the influence of mathematical logic and universal algebra namely the theory of varieties and identities of associative algebras lie algebras and their representations the last twenty years have seen the creation of the method of 2 words and alpha functions which allowed a number of problems in the theory of groups rings lie algebras and their representations to be solved in a unified way the possibilities of this method are far from exhausted this book sums up the applications of the method of 2 words and alpha functions in the theory of varieties and gives a systematic exposition of contemporary achievements in the theory of identities of algebras and their representations closely related to this method the aim is to make these topics accessible to a wider group of mathematicians

this volume contains the talks given at the indam workshop entitled polynomial identites in algebras held in rome in september 2019 the purpose of the book is to present the current state of the art in the theory of pi algebras the review of the classical results in the last few years has pointed out new perspectives for the development of the theory in particular the contributions emphasize on the computational and combinatorial aspects of the theory its connection with invariant theory representation theory growth problems it is addressed to researchers in the field

although there is nothing sweeter than the gospel there is much more sweetness to be enjoyed few christians seem to experience the transformation they hoped for and often burn out too early this is because we cannot escape the interpretation war each day over our identity what if we are ruled by a lie more than the truth about who we are what if condemnation has been their primary motivation and has functioned for us more than grace for too many years what if on the front end we already have what we try so hard to obtain dr bob smart walks us through the practical steps to embrace our true identity in christ by helping us embrace our glory gender story acceptance sonship and more by renouncing lies condemning thoughts and foolish strategies

this book gives a state of the art approach to the study of polynomial identities satisfied by a given algebra by combining methods of ring theory combinatorics and representation theory of groups with analysis the idea of applying analytical methods to the theory of polynomial identities appeared in the early 1970s and this approach has become one of the most powerful tools of the theory a pi algebra is any algebra satisfying at least one nontrivial polynomial identity this includes the polynomial rings in one or several variables the grassmann algebra finite dimensional algebras and many other algebras occurring naturally in mathematics the core of the book is the proof that the sequence of co dimensions of any pi algebra has integral exponential growth the pi exponent of the algebra later chapters further apply these results to subjects such as a characterization of varieties of algebras having polynomial growth and a classification of varieties that are minimal for a given exponent
