this book together with linear algebra constitutes a curriculum for an algebra program addressed to undergraduates the separation of the linear algebra from the other basic algebraic structures fits all existing tendencies affecting undergraduate teaching and i agree with these tendencies i have made the present book self contained logically but it is probably better if students take the linear algebra course before being introduced to the more abstract notions of groups rings and fields and the systematic development of their basic abstract properties there is of course a little overlap with the book linear algebra since i wanted to make the present book self contained i define vector spaces matrices and linear maps and prove their basic properties the present book could be used for a one term course or a year s course possibly combining it with linear algebra i think it is important to do the field theory and the galois theory more important say than to do much more group theory than we have done here there is a chapter on finite fields which exhibit both features from general field theory and special features due to characteristic p such fields have become important in coding theory
