space science

Justine explores the sister towns bisected by the border from many angles in this illuminating and poignant exploration of a place and situation that are little discussed yet have significant implications for larger political discourse. Publishers Weekly starred review. Emergency responders on the US-Mexico border operate at the edges of two states: they rush patients to hospitals across country lines, tend to the broken bones of migrants who jump over the wall, and put out fires that know no national boundaries. Paramedics and firefighters on both sides of the border are tasked with saving lives and preventing disasters in the harsh terrain at the center of divisive national debates. Justine's firsthand experience as an emergency responder provides the background for her gripping examination of the politics of injury and rescue in the militarized region surrounding the US-Mexico border. Operating in this area, firefighters and paramedics are torn between their mandate as frontline state actors and their responsibility as professional rescuers between the limits of law and pull of ethics. From this vantage, they witness what unfolds when territorial sovereignty, tactical infrastructure, and the natural environment collide. Justine reveals the binational brotherhood that forms in this crucible to stand in the way of catastrophe through beautiful ethnography and a uniquely personal perspective. Threshold provides a new way to understand politicized issues ranging from border security and undocumented migration to public access to healthcare today.

1st 72nd include the annual report of the secretary of the board

The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) provides a comprehensive assessment of the physical science basis of climate change. It considers in situ and remote observations, paleoclimate information, understanding of climate drivers, and physical, chemical, and biological processes and feedbacks. Global and regional climate modelling advances in methods of analyses and insights from climate services. It assesses the current state of the climate, human influence on climate in all regions, future climate change including sea level rise, global warming effects including extremes, climate information for risk assessment, and regional adaptation. Limiting climate change by reaching net zero carbon dioxide emissions and reducing other greenhouse gas emissions and benefits for air quality. The report serves policymakers, decision makers, stakeholders, and all interested parties with the latest policy-relevant information on climate change available as open access on Cambridge Core.
