This book constitutes the refereed proceedings of the third international workshop on algorithms and computation WALCOM 2009 held in Kolkata India in February 2009. The 30 revised full papers presented together with 4 invited papers were carefully reviewed and selected from 102 submissions. The papers feature original research in the areas of design and analysis of algorithms, computational geometry, graph drawing and graph algorithms. The papers are organized in topical sections on computational geometry, graph algorithms, complexity, graph drawing, approximation algorithms and randomized algorithms.

This book, newly available in paperback, examines a hitherto under-researched aspect of the European Union's policy process: the extent and the nature of the involvement of central governments in the implementation of EU public policy. It discusses how the co-ordination of these institutions affects their capacity to shape the way in which the commitments that they make in Brussels are turned into concrete reality at the national level. It shows that the nature of their involvement in implementation reflects the pattern of their involvement in the formulation of EU policy; however, since implementation unfolds over long periods of time, its patterns can change over time. The author draws on empirical evidence regarding the liberalisation of public procurement to demonstrate how the institutions of central governments bring about change. Comparing the central governments of Greece, France and Britain over a twenty-five year period, the author demonstrates that far from being the passive conduits of pressure emanating from the EU, the institutions of national central governments actively steer the implementation of EU public policy.
