acclaimed for its thorough presentation of mediation moderation and conditional process analysis this book has been updated to reflect the latest developments in process for spss sas and new to this edition r using the principles of ordinary least squares regression andrew f hayes illustrates each step in an analysis using diverse examples from published studies and displays spss sas and r code for each example procedures are outlined for estimating and interpreting direct indirect and conditional effects probing and visualizing interactions testing hypotheses about the moderation of mechanisms and reporting different types of analyses readers gain an understanding of the link between statistics and causality as well as what the data are telling them the companion website afhayes com provides data for all the examples plus the free process download new to this edition rewritten appendix a which provides the only documentation of process including a discussion of the syntax structure of process for r compared to spss and sas expanded discussion of effect scaling and the difference between unstandardized completely standardized and partially standardized effects discussion of the meaning of and how to generate the correlation between mediator residuals in a multiple mediator model using a new process option discussion of a method for comparing the strength of two specific indirect effects that are different in sign introduction of a bootstrap based johnson neyman like approach for probing moderation of mediation in a conditional process model discussion of testing for interaction between a causal antecedent variable *ital x ital* and a mediator *ital m ital* in a mediation analysis and how to test this assumption in a new process feature

the following points are developed first mediation relations are generally thought of in causal terms influences of an antecedent are transmitted to a consequence through an intervening mediator second mediation relations may assume a number of functional forms including nonadditive nonlinear and nonrecursive forms special attention is given to nonadditive forms or moderated mediation where it is shown that while mediation and moderation are distinguishable processes a particular variable may be both a mediator and a moderator within a single set of functional relations third current procedures for testing mediation relations in industrial and organizational psychology need to be updated because these procedures often involve a dubious interplay between exploratory correlational statistical tests and causal inference it is suggested that no middle ground exists between exploratory and confirmatory causal analysis and that attempts to explain how mediation processes occur require well specified causal models given such models confirmatory analytic techniques furnish the more informative tests of mediation author
