the paradigm of graph rewriting is used very little in the field of natural language processing but graphs are a natural way of representing the deep syntax and the semantics of natural languages deep syntax is an abstraction of syntactic dependencies

towards semantics in the form of graphs and there is a compact way of representing the semantics in an underspecified logical framework also with graphs then graph rewriting reconciles efficiency with linguistic readability for producing representations at some linguistic level by transformation of a neighbor level from raw text to surface syntax from surface syntax to deep syntax from deep syntax to underspecified logical semantics and conversely

in recent years online social networking has revolutionized interpersonal communication the newer research on language analysis in social media has been increasingly focusing on the latter's impact on our daily lives both on a personal and a professional level natural language processing nlp is one of the most promising avenues for social media data processing it is a scientific challenge to develop powerful methods and algorithms that extract relevant information from a large volume of data coming from multiple sources and languages in various formats or in free form this book will discuss the challenges in analyzing social media texts in contrast with traditional documents research methods in information extraction automatic categorization and clustering automatic summarization and indexing and statistical machine translation need to be adapted to a new kind of

data this book reviews the current research on nlp tools and methods for processing the non traditional information from social media data that is available in large amounts and it shows how innovative nlp approaches can integrate appropriate linguistic information in various fields such as social media monitoring health care and business intelligence the book further covers the existing evaluation metrics for nlp and social media applications and the new efforts in evaluation campaigns or shared tasks on new datasets collected from social media such tasks are organized by the association for computational linguistics such as semeval tasks the national institute of standards and technology via the text retrieval conference trec and the text analysis conference tac or the conference and labs of the evaluation forum clef in this third edition of the book the authors added information about recent progress in nlp for social media applications including more about the modern techniques provided by deep neural networks dnns for modeling language and analyzing social media data

the impact of computer systems that can understand natural language will be tremendous to develop this capability we need to be able to automatically and efficiently analyze large amounts of text manually devised rules are not sufficient to provide coverage to handle the complex structure of natural language necessitating systems that can automatically learn from examples to handle the flexibility of natural language it has become standard practice to use statistical models which assign probabilities for example to the different meanings of a word or the plausibility of grammatical constructions this book develops a general coarse to fine framework for learning and inference in large statistical models for natural language processing coarse to fine approaches exploit a sequence of models which introduce complexity gradually at the top of the sequence is a trivial model in which learning and inference are both cheap each subsequent model refines the previous one until a final full complexity model is reached applications of this framework to syntactic parsing speech recognition and machine translation are presented demonstrating the effectiveness of the approach in terms of accuracy and speed the book is intended for students and researchers interested in statistical approaches to natural language processing slav s work coarse to fine natural language processing represents a major advance in the area of syntactic parsing and a great advertisement for the superiority of the machine learning approach eugene charniak brown university
