since the publication of my book mathematical statistics shao 2003 i have been asked many times for a solution manual to the exercises in my book without doubt exercises form an important part of a textbook on mathematical statistics not only in training students for their research ability in mathematical statistics but also in presenting many additional results as complementary material to the main text written solutions to these exercises are important for students who initially do not have the skills in solving these exercises completely and are very helpful for instructors of a mathematical statistics course whether or not my book mathematical statistics is used as the textbook in providing answers to students as well as finding additional examples to the main text motivated by this and encouraged by some of my colleagues and springer verlag editor john kimmel i have completed this book mathematical statistics exercises and solutions this book consists of solutions to 400 exercises over 95 of which are in my book mathematical statistics many of them are standard exercises that also appear in other textbooks listed in the references it is only a partial solution manual to mathematical statistics which contains over 900 exercises

what is most valuable about this book is the very high quality of the model solutions it is a problem book for those teaching or learning a first course in mathematical statistics this one is outstandingly good and highly recommended goeff cohen university of edinburgh scotland the authors of this useful book take the view that the ability to solve practical problems is fundamental to an understanding of statistical techniques the book is designed to be read alongside a standard text i expect it is likely to be most useful to the teacher or to the able student forced to work largely alone david green this book not only provides a solution to each problem set but gives notes about that solution these notes should help students to understand the reasoning behind the techniques used so giving them confidence to deal with problems of a similar nature this book should prove a valuable addition to the library of students and teachers of statistics m j g ansell hatfield polytechnic the book consists of a series of examples each followed by one or more alternative solutions and accompanying notes the solutions themselves are useful models the notes go one stage further and explain why particular techniques were chosen to solve each problem this approach may help to overcome the common difficulty of deciding which method to choose when answering examination questions the book is easy to read and suitable for individual study richard j field these notes provide fascinating insights into the process that experienced statisticians go through in order to solve a problem students and maybe some instructors will benefit greatly

from going through the solutions and the notes in this book. The approach of the authors is to improve a student's understanding of statistics and to help students appreciate which techniques might be appropriate for any problem. Zentralblatt Math 2001

The complexity of today's statistical data calls for modern mathematical tools. Many fields of science make use of mathematical statistics and require continuous updating on statistical technologies. Practice makes perfect since mastering the tools makes them applicable. Our book of exercises and solutions offers a wide range of applications and numerical solutions based on R. In modern mathematical statistics the purpose is to provide statistics students with a number of basic exercises and also an understanding of how the theory can be applied to real world problems. The application aspect is also quite important as most previous exercise books are mostly on theoretical derivations. Also we add some problems from topics often encountered in recent research papers. The book was written for statistics students with one or two years of coursework in mathematical statistics and probability, professors who hold courses in mathematical statistics and researchers in other fields who would like to do some exercises on math statistics.

This text contains 300 problems in mathematical statistics together with detailed solutions.

The exercises are grouped into seven chapters with titles matching those in the author's *Mathematical Statistics*. It can also be used as a stand alone because exercises and solutions are comprehensible independently of their source and notation and terminology are explained in the front of the book. Suitable for self study for a statistics PhD qualifying exam.
