the purpose of this meeting as with the seven previous conferences in this series was to bring together particle and nuclear physicists to share scientific reports and discuss areas of research which overlap both their disciplines its relevance has steadily grown as the areas of overlap between particle and nuclear physics have increased in addition the success of the standard model has provided a common underpinning for both disciplines as well as similar fundamental goals indeed quantum chromodynamics qcd has proven to be the theory of strong interactions as such it forms the basis for nuclear physics as well as high energy hadronic interactions topics included are qcd spectroscopy and dynamics relativistic heavy ions qcd and nuclear structure lepton hadron and hadron hadron scattering heavy quark and heavy lepton physics spin physics nuclear and particle astrophysics neutrinos accelerators facilities and detectors as well as tests of fundamental symmetries

spectroscopy has become the organic chemist s most important tool in identifying compounds and studying their interactions the arsenal of techniques available to the research chemist has over the years expanded from the familiar infrared proton nmr and mass spectroscopy to include the routine use of carbon 13 nmr spectroscopy and such modern methods of data acquisition as fourier transform nmr laser raman spectroscopy and uv spectroscopy this book serves as an introduction to all of the major spectroscopic techniques using over 200 actual spectra as examples and providing a substantial number of problems and completely worked through solutions that demonstrate how spectral techniques are applied to analytical problems the book represents a significant departure from the scope of general spectroscopy texts in addition to the usual chapters on infrared proton nmr and mass spectroscopy a number of increasingly important techniques have been included for the first time chapter 4 for instance introduces not only the analysis of proton nmr spectra but also describes iteration of theoretical nmr spectra for a best fit with observed experimental spectra using the popular laocoön iii program a complete fortran listing for a conversational pendix i chapter 5 presents a non mathematical description of fourier transform nmr including signal averaging decoupling methods quadrature detection and the fourier transform itself and chapter 6 goes on to describe fourier transform techniques in carbon 13 spectroscopy chapter 7 introduces simple huckel m o theory and the shmo program for calculating the resonance stabilization of various systems material which lays the groundwork for chapter 8 s discussion of ultraviolet spectroscopy using examples of ways in which energies can be correlated with shmo parameters a shmo timesharing conversational program is listed in appendix ii finally chapter 10 outlines the organic chemical applications of laser raman spectroscopy and the functional groups most easily identified using this method both organic chemists and graduate and advanced undergraduate students will find in the book s breadth of coverage an ideal introduction to the identification of organic compounds by spectroscopic means publisher
