this is the first book devoted to a systematic description of the linear theory of piezoelectric shells and plates theory the book contains two parts in the first part the theories for electroelastic thin walled elements of arbitrary form with different directions of preliminary polarization are presented in an easy form for practical use the approximate methods for integrating the equations of piezoelectric shells and plates are developed and applied for solving some engineering problems in the second part the theory of piezoelectric shells and plates is substantiated by the asymptotic method the area of applicability for different kinds of electroelastic shell theories is studied a new problem concerning the electroelastic phenomena at the edge of a thin walled element is raised and solved the theory of piezoelectric shells and plates will be valuable to researchers working in the field of electroelasticity as well as to electrical and electronic engineers who use thin walled piezoelements it is also be helpful for students and post graduates specializing in mechanics and for scientists concerning asymptotic methods

the monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality it examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis the sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought the fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum the classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle it is argued that the epistemic path that links ontological space to the epistemological space is information the ontological space is taken as the primary category of reality while the epistemological space is shone to be a derivative such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques the relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality the book is written for professionals researchers and students working in philosophy of science decision choice theories economies sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge it is further aimed at research institutions and libraries the subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory the book will have a global appeal and across disciplines its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production
