the contents of this book are the proceedings of the acs symposium impact of processing on food safety which was held april 16 17 1997 at the american chemical society national meeting in san francisco ca this symposium brought together re searchers from diverse backgrounds in academia government and industry twenty speakers discussed topics ranging from the regulatory aspects of food processing to the microbiological and chemical changes in food during processing the main goal of food processing is to improve the microbial safety of food by de stroying pathogenic and spoilage organisms food processing can also improve food safety by destroying or eliminating naturally occurring toxins chemical contaminants and antinutritive factors unfortunately processing can also cause chemical changes that result in the formation of toxic or antinutritive factors the purpose of this book is to summarize our knowledge of both the beneficial and deleterious effects of processing chapter i con siders the consumer s perceptions about food contaminants and food processing chapter 2 summarizes the effects of traditional and nontraditional processing methods on microorganisms in food chapters 3 6 review the effects of processing on lipids fatty acids and cholesterol in food changes in the nutritive value of vitamins and minerals as a result of processing are discussed in chapter 7 chapter 8

concentrates on how processing reduces the allergenicity of some foods

over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport plants have become larger and are often situated in or close to densely populated areas increased hazard of loss of life or property is continually highlighted with incidents such as flixborough bhopal chernobyl three mile island the phillips 66 incident and piper alpha to name but a few the field of loss prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property this book is a detailed guidebook to defending against these and many other hazards it could without exaggeration be referred to as the bible for the process industries this is the standard reference work for chemical and process engineering safety professionals for years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety an entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead frank lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field sam mannan is professor of chemical engineering at texas a m university and heads the mary kay o connor process safety center at texas a m he received his ms and ph d in chemical engineering from the university of oklahoma and joined the chemical engineering department at texas a m university as a professor in 1997 he has over 20 years of experience as an engineer working both in industry and academia new detail is added to chapters on fire safety engineering explosion hazards analysis and suppression and new appendices feature more recent disasters the many thousands of references have been updated along with standards and codes of practice issued by authorities in the us uk europe and internationally in addition to all this more regulatory relevance and case studies have been included in this edition written in a clear and concise style loss prevention in the process industries covers traditional areas of personal safety as well as the more technological aspects and thus provides balanced and in depth coverage of the whole field of safety and loss prevention a must have standard reference for chemical and process engineering safety professionals the most complete collection of information on the theory practice design elements equipment and laws that pertain to process safety only single work to provide everything principles practice codes standards data and references needed by those practicing in the field

this widely respected and frequently consulted reference work provides a wealth of information and guidance on industrial chemistry and biotechnology industries covered span the spectrum from salt and soda ash to advanced dyes chemistry the nuclear industry the rapidly evolving biotechnology industry and most recently electrochemical energy storage devices and fuel cell science and technology other topics of surpassing interest to the world at large are covered in chapters on fertilizers and food production pesticide manufacture and use and the principles of sustainable chemical practice referred to as green chemistry finally considerable space and attention in the handbook are devoted to the subjects of safety and emergency preparedness it is worth noting that virtually all of the chapters are written by individuals who are embedded in the industries whereof they write so knowledgeably
