homotopy analysis method in nonlinear differential equations presents the latest developments and applications of the analytic approximation method for highly nonlinear problems namely the homotopy analysis method ham unlike perturbation methods the ham has nothing to do with small large physical parameters in addition it provides great freedom to choose the equation type of linear sub problems and the base functions of a solution above all it provides a convenient way to guarantee the convergence of a solution this book consists of three parts part i provides its basic ideas and theoretical development part ii presents the ham based mathematica package bvph 1 0 for nonlinear boundary value problems and its applications part iii shows the validity of the ham for nonlinear pdes such as the american put option and resonance criterion of nonlinear travelling waves new solutions to a number of nonlinear problems are presented illustrating the originality of the ham mathematica codes are freely available online to make it easy for readers to understand and use the ham this book is suitable for researchers and postgraduates in applied mathematics physics nonlinear mechanics finance and engineering dr shijun liao a
