this book offers a comprehensive account of logic that addresses fundamental issues concerning the nature and foundations of the discipline the authors claim that these foundations can not only be established without the need for strong metaphysical assumptions but also without hypostasizing logical forms as specific entities they present a systematic argument that the primary subject matter of logic is our linguistic interaction rather than our private reasoning and it is thus misleading to see logic as revealing the laws of thought in this sense fundamental logical laws are implicit to our language games and are thus more similar to social norms than to the laws of nature peregrin and svoboda also show that logical theories despite the fact that they rely on rules implicit to our actual linguistic practice firm up these rules and make them explicit by carefully scrutinizing the project of logical analysis the authors demonstrate that logical rules can be best seen as products of the so called reflective equilibrium they suggest that we can profit from viewing languages as inferential landscapes and logicians as geographers who map them and try to pave safe routes through them this book is an essential resource for scholars and researchers engaged with the foundations of logical theories and the philosophy of language
