this volume details the use of systems analysis techniques in the applied research of forestry and the forest industry thirty papers from distinguished authors cover the sequence from tree growing

through harvesting timber processing forest products markets to the final consumption of forest products

the types of articles most sought after by naval research logistics fall into the following classes i modeling and analysis of problems motivated by current real world applications ii exploratory modeling and analysis of problems motivated by potential future real world applications iii major methodological advances and iv expository pieces of exceptional clarity areas represented include but are not limited to probability statistics simulation optimization game theory scheduling reliability inventory decision analysis and combatmodels

the purpose of the paper is to show that any generalized network problem whose matrix does not have full row rank is equivalent to a pure network problem furthermore the authors develop an efficient procedure which may be used simultaneously to determine the rank of the incidence matrix and transform if possible the generalized network problem into a pure problem transforming such problems into pure network problems provides several advantages such as increasing computational efficiency eliminating roundoff error providing a simple check for infeasibility extending the results in the literature on pure networks to appropriate generalized networks author
