the twenty first century presents humanity with a challenge of critical importance securing water and energy resources in a rapidly changing world these two essential commodities are not separate entities managed in isolation they are intricately and fundamentally linked in a relationship known as the water energy nexus we require enormous amounts of energy to extract treat and distribute water and conversely generating almost every form of energy demands substantial water resources for cooling and processing this book water and energy nexus engineering solutions for a sustainable planet is born from the conviction that this challenge must be met with practical engineering focused solutions it moves beyond high level policy discussions to delve into the mechanics systems and technologies that can drive real world efficiency and resilience we will explore the energy intensity of desalination and wastewater treatment the water footprint of various power generation methods and critically how to integrate these systems from massive utility scale operations down to the mechanical electrical and plumbing mep systems within our buildings drawing on decades of experience in global consulting i intend this work to be a comprehensive guide that bridges the gap between resource theory and application by understanding and optimizing the nexus at the design and operational level we can forge a path toward true sustainability resource security and a healthier planet for all
