an introduction to natural language semantics that offers an overview of the empirical domain and an explanation of the mathematical concepts that underpin the discipline this textbook offers a comprehensive introduction to the fundamentals of those approaches to natural language semantics that use the insights of logic many other texts on the subject focus on presenting a particular theory of natural language semantics this text instead offers an overview of the empirical domain drawn largely from standard descriptive grammars of english as well as the mathematical tools that are applied to it readers are shown where the concepts of logic apply where they fail to apply and where they might apply if suitably adjusted the presentation of logic is completely self contained with concepts of logic used in the book presented in all the necessary detail this includes propositional logic first order predicate logic generalized quantifier theory and the lambek and lambda calculi the chapters on logic are paired with chapters on english grammar for example the chapter on propositional logic is paired with a chapter on the grammar of coordination and subordination of english clauses the chapter on predicate logic is paired with a chapter on the grammar of simple independent english clauses and so on the book includes more than five hundred exercises not only for the mathematical concepts introduced but also for their application to the analysis of natural language the latter

exercises include some aimed at helping the reader to understand how to formulate and test hypotheses

natural language semantics and pragmatics are now two major fields in linguistics philosophy artificial intelligence and computational linguistics with the development of large and efficient prolog interpreters and compilers and with the expansion of the theoretical aspects of logic programming the study of natural language semantics and related pragmatic aspects is now becoming a very attractive topic the proceedings of this workshop reflect these trends the papers cover almost all the current research fields in natural language including morphology syntax parser design generation feature checking and specification semantic representations and construction of cooperative responses articles on syntax deal with constraints to parsing and generation rule pruning and comparison of logic based language systems the material on the compilers involves functional logic grammars and unification based grammars the work on semantics investigates logico semantic induction data semantics comparatives conceptual graphs discourse representation and graphs papers on pragmatics discuss disambiguation cooperation with the user through integrity constraints and question interpretation through epistemic reasoning panel discussions are centered around future directions of research as well as comparisons between different points of view about actual research projects

this book provides cutting edge research on reality its nature and fundamental structure represented both by human minds and intelligent machines striving to describe a world model and ontology organized human knowledge powerful reasoning systems and secure communication interoperability between human beings and computing reasoning systems promising the profound revolution in human values and ways of life provided by publisher
