bachelor thesis from the year 2021 in the subject business economics investment and finance grade 1 0 language english abstract this study is concerned with an empirical analysis of asset pricing more specifically this paper examines whether multifactor asset pricing models are able to explain variation in reit returns in the us and japan in addition to traditional multifactor models an alternative four factor model aff was developed considering net profit margin as an additional risk factor thence this paper seeks to provide valuable information for investors and fund managers regarding their indirect real estate investment selection using a sample period between july 1994 us july 2011 japan to december 2020 rigorous multiple time series regression is applied to calculate factor loadings for each risk factor and the corresponding alpha values of each model to

evaluate their effectiveness in explaining variation and cross section of reit returns most studies on asset pricing models focus on size and value sorted portfolios as dependent variables this paper broadens the approach with four other double sorted test portfolios to check the robustness of each single factor to explain return anomalies results show that market premium and size premium represent risk factors for us reits whereas market premium and value premium are suitable risk factors for japanese reits the momentum factor does not capture risk and is insignificant in both markets the study shows low correlations between traditional and reit specific as well as between us and japanese risk factors this suggests that firstly risk factors are country specific and secondly that they are asset specific moreover the fama french three factor model ff3 clearly outperforms the capm while the carhart four factor model ch4 marginally improves the explanatory power over the ff3 this is observed in both markets outcomes demonstrate that the alternative four factor model aaf does not improve prediction power for returns of japanese reits compared to the ff3 and ch4 on the contrary results are ambiguous concerning us reits while the additional risk factor net profit margin generates a negative return the model is superior to the ff3 and ch4 in terms of explaining variation and cross section of returns

designed for use in the cfa program or by investment professionals this textbook provides a guide to applying quantitative analysis to the investment process from the perspective of an investment generalist it covers the knowledge skills and abilities needed to utilize quantitative methods chapters address the time value of money discounted cash flow applications market returns statistical concepts probability concepts probability distributions sampling and estimation hypothesis testing correlation and regression time series analysis and portfolio concepts the authors are cfas affiliated with universities or private companies c book news inc

diploma thesis from the year 2007 in the subject business economics investment and finance grade 1 0 european business school international university schlo reichartshausen oestrich winkel language english abstract in a time of tremendous advances in technology it seems striking why the location of corporate headquarters should matter for the firm s stock return at first glance low information and communication costs are thought to facilitate the interaction between market participants all around the world and thus deem the role of geographical location as marginal this reasoning however does not take investors behavior into account even if over the past decades international capital markets have widely been liberalized and the variety of investment opportunities across countries has grown substantially many investors do not take the risk reduction potential of foreign assets into consideration despite the extensive benefits of international diversification investors still over weight domestic and local assets in their portfolios although this home bias has drawn much academic attention and its existence is commonly accepted a satisfactory ration ale could not yet be obtained further the resulting economic implications for asset pricing remain unexplored yet locality could be highly relevant for cost of capital cal culation asset allocation and performance evaluation 1 as a result it is of crucial importance to investigate the relationship between portfolio holdings of investors and stock pricing patterns to shed light on a potential geographical component of asset pricing the lack of academic research motivates to explore this area in greater detail the purpose of this thesis is to fill the existing gap and establish a link between local bias and asset pricing therefore a detailed overview of the home bias puzzle as well as of local asset pricing is presented the economic impact of local bias on stock returns is empirically

organized around a central core of consistent fundamental concepts this work focuses on the importance of building an efficient portfolio utilizing an asset allocation strategy pricing and trading are covered and these concepts are then applied to portfolio planning in real world securities markets governed by risk return relationships the text balances theoretical and real world applications in order to help students understand investment theory and portfolio development this edition includes expanded coverage of of derivatives as effective risk management tools a new section on the global economy and consideration of international accounting issues and exotic options in addition market microstructure coverage has been expanded to include nasdaq trading practices controversy

international financial transactions have become less regulated and less costly over the past two decades this study consisting of two parts examines several issues related to this increase in international capital mobility

the first part is devoted to the estimation of the correlation of saving and investment which should be zero under capital mobility according to feldstein and horioka questions addressed are what are the implications of the intertemporal budget constraint should time series analysis or cross section analysis be used the second part of the study focuses on the mean variance portfolio model which is an important benchmark model in financial economics but is strongly rejected in empirical tests here questions include can capital controls explain why the mean variance model performs so badly what is the role of adjustment costs
