this book works through some of the theoretical issues that have been accumulating in informal logic over the past 20 years at the same time it defines a core position in the theory of argument in which those issues can be further explored the underlying concern that motivates this work is the health of practice of argumentation as an important cultural artifact a further concern is for logic as a discipline argumentative and dialectical in nature this book presupposes some awareness of the theory of argument in recent history and some familiarity with the positions that have been advanced it will be of interest to academics researchers and advanced undergraduate and graduate students in the disciplines of logic rhetoric linguistics speech communication english composition and psychology

divided into four major sections this textbook provides an in depth exploration of the biblical philosophical cultural and practical concerns facing african christians as they proclaim and defend the gospel in africa written by a diverse group of pastors and scholars it provides a much needed

interdisciplinary and contextualized approach to apologetics it also seeks to bridge the gap between academic research and ministry practice touching on such topics as hermeneutics biblical criticism church history the nature of evil religious inclusivism muslim christian engagement eldership rites domestic violence cults and the digital age biblically robust contextually relevant ministry oriented and accessible this is a remarkable resource for enriching the life and ministry of christians in africa and beyond

argumentation theory is a distinctly multidisciplinary field of inquiry it draws its data assumptions and methods from disciplines as disparate as formal logic and discourse analysis linguistics and forensic science philosophy and psychology political science and education sociology and law and rhetoric and artificial intelligence this presents the growing group of interested scholars and students with a problem of access since it is even for those active in the field not common to have acquired a familiarity with relevant aspects of each discipline that enters into this multidisciplinary matrix this book offers its readers a unique comprehensive survey of the various theoretical contributions which have been made to the study of argumentation it discusses the historical works that provide the background to the field and all major approaches and trends in contemporary research argument has been the subject of systematic inquiry for twenty five hundred years it has been graced with theories such as formal logic or the legal theory of evidence that have acquired a more or less settled provenance with regard to specific issues but there has been nothing to date that qualifies as a unified general theory of argumentation in all its richness and complexity this being so the argumentation theorist must have access to materials and methods that lie beyond his or her home subject it is precisely on this account that this volume is offered to all the constituent research communities and their students apart from the historical sections each chapter provides an economical introduction to the problems and methods that characterize a given part of the contemporary research program because the chapters are self contained they can be consulted in the order of a reader s interests or research requirements but there is value in reading the work in its entirety jointly authored by the very people whose research has done much to define the current state of argumentation theory and to point the way toward more general and unified future treatments this book is an impressively authoritative contribution to the field

the purpose of the book is to examine the theological claims of ethics faith and belief from a philosophical perspective the abrahamic and mosaic covenants of the old testament jesus of the synoptic gospels and paul s writings serve as the frame of reference in examining a biblical expression of reason and structured logic the message of jesus centered on the kingdom of god defined the meaning of faith and belief established a new ethic and framed the message in logic forms the life and death of jesus brought the realization of god s final covenant as prophesied by the old testament however paul appropriated and developed the jesus of history into the mythological eschatological christ figure the clash of philosophy and theology is evident with theological presuppositions that are based on spiritual insight and divine revelation logic in scripture employs propositions based primarily on revealed proof that is within the context of that which cannot be proven absolutely uncovering the identity of yhwh in the manuscripts and

religious practices of canaanite culture clearly associated yhwh with the polytheism of the ugarit texts yhwh was one of the seventy sons of the canaanite most high god el and took on a unique identity that was rooted in el and the polytheistic nature of the pantheon of gods theological truths stand within the context of faith and reason stands apart from faith and infers only that which can be proven based on evidence that which is knowable by faith cannot be known by reason since reason cannot validate that which is not proven to exist

the dictionary of modern american philosophers includes both academic and non academic philosophers anda large number of female and minority thinkers whose work has been neglected it includes those intellectualsinvolved in the development of psychology pedagogy sociology anthropology education theology politicalscience and several other fields before these disciplines came to be considered distinct from philosophy in thelate nineteenth century each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas abibliography of writings and suggestions for further reading while all the major post civil war philosophers arepresent the most valuable feature of this dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers in many cases the dictionary of modern americanphilosophers offers the first scholarly treatment of the life and work of certain writers this book will be anindispensable reference work for scholars working on almost any aspect of modern american thought

deductive logic is designed as an intermediate level text directed at upper division students from philosophy and the humanities its focus is exclusively on deductive logic avoiding altogether topics such as informal reasoning and scientific method normally included in introductory logic courses its exposition of logical topics is informal with emphasis on explaining the basic concepts and procedures of modern symbolic logic in the simplest and most intuitive manner possible rather than on developing a rigorous formal system and providing proofs of its properties the fact that the text presupposes a course offered to philosophy students and serves to introduce them to logic as the language of philosophy has strongly influenced the selection of topics the topics here are controversial and the problems not easily resolved but this text strives to relate the formal logical structures introduced to issues of philosophic interest

twelve essays by leading informal logicians including

this collection of readings investigates many different philosophical issues concerning the nature of propositions and the ways they have been regarded through the years the book includes articles by bertrand russell gottlob frege alonzo church david kaplan john perry saul kripke hilary putnam mark richard scott soames and nathan salmon

list of members in v 1

paperback this volume finds its origin in a colloquium on logic and argumentation held in june 1994 in amsterdam and sponsored by the royal netherlands academy of arts and sciences the

papers included have been selected for the role they can play in illuminating current thinking about the various kinds of relations between logic and argumentation aiming to provide some background to the academic endeavour of exploring the connections between logic and argumentation this volume offers the reader some representative specimina of current thinking about this subject
