thousands of patents address new coating types new developments new chemical compositions however sometimes coatings is still considered as an art this book now deals with questions that are essential for a good performance of this art is there a given process stability is there an inherent process capability for a given specification which cannot be improved what is the right preventive maintenance strategy is there a chance to end up with coating process capabilities in the order of other manufacturing processes this book is not a pure scientific book it is of most value for the engineer involved in design processing and application of thermally sprayed coatings to understand the capability and limitations of thermal spraying to understand deposition efficiency waste of powder and the importance of maintenance and spare parts for quick change over of worn equipment to use offline programming and real equipment in an optimum mix to end up with stable processes in production after shortest development time and in the end to achieve the final target in production process stability at minimum total cost
