this book offers a comprehensive presentation of the most important phenomena in building physics heat transfer moisture humidity sound acoustics and illumination as the book is primarily aimed at engineers it addresses technical issues with the necessary pragmatism and incorporates many practical examples and related international standards in order to ensure a complete understanding it also explains the underlying physical principles and relates them to practical aspects in a simple and clear manner the relationships between the various phenomena of building physics are clarified through consistent cross referencing of formulas and ideas the second edition features both new and revised sections on topics such as energy balance solar gain ventilation road traffic and daylighting and takes into account new developments in international standards it newly features almost 200 illustrations and 21 videos worth of supplementary material the book is primarily aimed at students of civil engineering and architecture as well as scientists and practitioners in these fields who wish to deepen or broaden their knowledge of topics within building physics

the book details sources of thermal energy methods of capture and applications it describes the basics of thermal energy including measuring thermal energy laws of thermodynamics that govern its use and transformation modes of thermal energy conventional processes devices and materials and the methods by which it is transferred it covers 8 sources of thermal energy combustion fusion solar fission nuclear geothermal microwave plasma waste heat and thermal energy storage in each case the methods of production and capture and its uses are described in detail it also discusses novel processes and devices used to improve transfer and transformation processes

materials for architects and builders provides a clear and concise introduction to the broad range of materials used within the construction industry and covers the essential details of their manufacture key physical properties specification and uses understanding the basics of materials is a crucial part of undergraduate and diploma construction or architecture related courses and this established textbook helps the reader to do just that with the help of colour photographs and clear diagrams throughout this new sixth edition has been completely revised and updated to include the latest developments in materials research new

images appropriate technologies and relevant legislation the ecological effects of building construction and lifetime use remain an important focus and this new edition includes a wide range of energy saving building components

the 14th rehva hvac world congress clima2022 challenges advances in technologies for smart energy transition digitization circularity health and well being in buildings how can we create circular buildings fully heated cooled and powered by renewable energy how can we design human centered indoor environments while mastering life cycle costs how can we also include their integration into infrastructure for energy health data and education

this book provides a novel approach to building pathology in current buildings drawing on the available literature hands on experience and fieldwork inspections it presents a systematic perspective on the pathology of the building envelope the book addresses natural stone claddings adhesive ceramic tiling renders painted surfaces external thermal insulation composite systems etics architectural concrete surfaces windows and doors framing and claddings for pitched and flat roofs in addition to highlighting selected materials and construction elements the book proposes a global classification system for defects and their probable causes together with in situ diagnosis methods and repair techniques it also identifies the relationships between defects and causes diagnosis methods and repair techniques and the interdependence between different defects presenting these relations in the form of correlation matrices support files with detailed information and an inspection form are also provided selected case studies are presented to illustrate the value of a guidance system in fieldwork given its scope the book offers a valuable guide particularly for researchers building inspectors civil engineers architects and maintenance planners

future energy technologies must embrace and achieve sustainability by displacing fossil carbon intensive energy consumption or capture reuse sequester fossil carbon this book provides a deeper knowledge on individual low and zero carbon technologies in a comprehensive way covering details of recent developments on these technologies in different countries it also covers materials and processes involved in energy generation transmission distribution storage policies and so forth including solar electrical thermal systems energy from biomass and biofuels energy transmission distribution and storage and buildings using energy efficient lighting

hvac systems load shifting indoor climate and energy and ventilation performance analyses are the key topics when improving energy performance in new and renovated buildings this development has been boosted by the recently established nearly zero energy building requirements that will soon be in use in all eu member states as well as similar long term zero energy building targets in japan the us and other countries the research covered in this special issue provides evidence of how new technical solutions have worked in practice in new or renovated buildings and also discusses problems and how solutions should be further developed another focus is on the more detailed calculation methods needed for the correct design and sizing of dedicated systems and for accurate quantification of energy savings occupant behavior and building operation is also examined in order to avoid common performance gaps between calculated and measured performance these topics demonstrate the challenge of high performance buildings as in the end comfortable buildings with good indoor climate which are easy and cheap to operate and maintain are expected by end customers ventilation performance heating and cooling sizing energy predictions and optimization load shifting and field studies are some of the key topics in this special issue contributing to the future of high performance buildings with reliable operation

the metric handbook is the major handbook of planning and design data for architects and architecture students with over 100 000 copies sold to successive generations of architects and designers it remains the ideal starting point for any project and belongs in every design office the seventh edition references the latest regulations and construction standards and includes new chapters on data centres and logistics facilities alongside basic design data for all the major building types for each building type the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of as well as buildings the metric handbook deals with broader aspects of design such as materials acoustics and lighting and general design data on human dimensions and space requirements the metric handbook is the unique reference for solving everyday planning problems
