discussion of the precise nature and position of boundaries between disciplines is nearly always counterproductive the need is usually to cross them not to emphasize them and any such discussion of the distinction between ethology and comparative psychology would today seem patently absurd while there may be differences in outlook no boundaries exist but when frank beach started in research that was not the case comparative psychology flourished in the united states whereas ethology was unknown beach started as a comparative psychologist and has always called himself either that or a behavioral endocrinologist yet among the comparative psychologists of his generation he has had closer links with the initially european ethologists than almost any other he was indeed one of the editors of the first volume of behaviour that this should have been so is not surprising once one knows that his ph d thesis concerned the neural basis for innate behavior that he used to sleep in the laboratory so that he could watch mother rats giving birth and that in 1935 he was using model young to analyze maternal behavior furthermore for nine years he worked in the american museum of natural history in a department first named experimental biology and later when beach had saved it from extinction and become its chairman the department of animal behavior it was in 1938 during frank's time at the american museum that he was first introduced to niko tinbergen by ernst mayr

outgrowth of a common outlook on scientific psychology a viewpoint known as functionalism first articulated around the turn of the century by William James, John Dewey, James Rowland Angell, Harvey Carr and others. Part I takes a broad historical perspective on the role of functionalism in the development of scientific psychology. Essays here discuss the emergence of the functionalist perspective, the importance of the functionalists' appreciation of societal problems to the rapid progress and future contributions of psychology. Part II presents current research emphasizing biological aspects of psychological phenomena. It includes chapters on the evolutionary perspective that motivates comparative studies of behavior and cognition, clinical neuropsychology, how the coordinated development of psychophysiological and behavioral methods have provided insights in medicine and space travel, and research on the development of the nervous system. The next part focuses on phenomena of mental life by sampling current research on perception, cognition, and development. The functionalist perspective in studies of cognitive development in children, changes in mental function that occur later in life, and comprise a major challenge to research in cognitive gerontology. How one can best describe the structure of intelligence and how the evolution of western art reveals historic parallels between artistic expression and theories of perception. Part IV studies research on the interactions among people, the domain of social phenomena. Essays investigate the adaptive nature of social interactions, the social characteristics of giving and receiving, and how the behavioral effects of marijuana and patterns of usage vary by environment and social context.

This book offers a historical introduction to the remote origins of psychology and is the first book in a series on the history of the subject combining a deep history approach with the study of ancient civilisations. It places psychology in a historical and global context using rigorous academic research. This book begins by separating the Greek components of psychology: psyche and logos, in order to trace their histories, separate and together, through the global Neolithic and Bronze Ages. The author develops a toolkit by deconstructing the writing of history, modern psychology, and analysis of culture, and by introducing theories from neuroscience and cultural psychology that can be tested against the data. He then takes readers on a journey back in time from the borders of our current climatic envelope, the Holocene, towards the present through ancient Iraq, Egypt, Israel, and China. Each chapter deepens the reader's understanding of psychology in its global context, outside the boundaries of western culture. In so doing, the book initiates a post-colonial re-narration, showing that the story of psychology is wider and deeper than many contemporary origin stories suggest. Presented in an accessible manner, this is an excellent resource for students of psychology, philosophy, history, linguistics, archaeology, and anthropology, as well as general readers who want to learn more about the origins of this fascinating subject. precedes shamanism and psychology in ancient greece and india the evolution of psyche which applies the same framework to the indo european world
