the uses of sense provides a novel account of wittgenstein's view of language as expressed in the philosophical investigations on the account wittgenstein's view is a radical break with a still dominant fregean tradition travis applies this account to show the significance of private language and of other major themes in the investigations such as family resemblance and language games wittgenstein uses the idea of private language for a thought experiment what is the experiment meant to test travis suggests that it is two pictures of the having of semantic properties by whatever items might do so that are at stake one picture is fregean the other is opposed to it in denying a certain fixity in the semantic properties of an item which for example might permit simply defining some items as the bearers of such and such semantics on wittgenstein's picture the semantics of any item is variable across occasions for viewing it or using it this variability arises through the dependence of any item's semantics on its users and their uses of it this dependence requires publicity of a sort excluded by

private language if items may still have semantics privately travis argues then wittgenstein s picture may not be compulsory but if semantics collapses under such unnatural conditions then in ways wittgenstein indicates that shows something fundamentally mistaken in the fregean approach

in people s minds smells flavors and affective phenomena are perceived as closely linked but is it genuinely the case the scientific study of this question is a rapidly expanding field both in healthy and in clinical populations although still under studied in comparison to other sensory modalities chemical senses have proven to bring unique knowledge in the understanding of affective phenomena in this context this research topic is aimed to offer a snapshot of the present knowledge and questions raised in this field topics include but are not limited to affects elicited by odors and or flavors in different individuals contexts or cultures emotional potency of odors in guiding human behavior and cognition e g attention memory formation decisions and choices withdrawal and approach behavior affects communicated by body odors affect regulation disorders and chemosensory perception studies on the biological underpinnings of these effects are also included

the forgotten sense leaves us with the hope of new discoveries and new recoveries so that we may once again revel in the glorious fragrant world around us wall street journal by one of the world s leading researchers into the science of smell a fascinating exploration of our most essential yet least understood sense enabling us to appreciate food and drink warning us of dangers and even influencing who we fall in love with our sense of smell guides our lives far more than our screen heavy sight privileged era would suggest it animates our experience of food and drink helps us access memories and strengthens our intimacy with each other but long considered our most beastly sense the inner workings of smell have stumped scientists for centuries now cognitive scientist and leading smell researcher jonas olfsson uncovers the sophisticated processes that drive our olfactory system with profound implications for how we perceive the world around us drawing from cutting edge original research olfsson shows that not only is our sense of smell extraordinarily sensitive its process of chemical exchange shaped human evolution on its most fundamental level from the pheromones environmental signals and emotions we process with each breath olfaction makes us the individuals we are moreover smelling is an intellectual exercise olfsson argues one that we have the remarkable capacity to strengthen and with some effort even regain after illness with infectious curiosity and a host of applications from emotional health and gastronomy to literature and even politics the forgotten sense is a wide ranging and entertaining look at this most understudied function of human life

bacterial pathogenicity factors are functionally diverse they may facilitate the adhesion and colonization of bacteria influence the host immune response assist spreading of the bacterium by e g evading recognition by immune cells or allow bacteria to dwell within protected niches inside the eukaryotic cell exotoxins can

be single polypeptides or heteromeric protein complexes that act on different parts of the cells at the cell surface they may insert into the membrane to cause damage bind to receptors to initiate their uptake or facilitate the interaction with other cell types for example bacterial superantigens specifically bind to major histocompatibility complex mhc ii molecules on the surface of antigen presenting cells and the t cell receptor while cytolysins cause pore formation for intracellular activity exotoxins need to be translocated across the eukaryotic membrane gram negative bacteria can directly inject effector proteins in a receptor independent manner by use of specialized needle apparatus such as bacterial type ii iii or type iv secretion systems other methods of translocation include the phagocytic uptake of bacteria followed by toxin secretion or receptor mediated endocytosis which allows the targeting of distinct cell types receptor based uptake is initiated by the binding of heteromeric toxin complexes to the cell surface and completed by the translocation of the effector proteins across the endosomal membrane in the cytosol toxins interact with specific eukaryotic target proteins to cause post translational modifications that often result in the manipulation of cellular signalling cascades and inflammatory responses it has become evident that the actions of some bacterial toxins may exceed their originally assumed cytotoxic function for example pore forming toxins do not only cause cytolysis but may also induce autophagy pyroptosis or activation of the mapk pathways resulting in adjustment of the host immune response to infection and modification of inflammatory responses both locally and systemically other recently elucidated examples of the immunomodulatory function of cell death inducing exotoxins include tcdB of clostridium difficile which activates the inflammasome through modification of cellular rho gtpases or the staphylococcus d toxin which activates mast cells the goal of this research topic was to gather current knowledge on the interaction of bacterial exotoxins and effector proteins with the host immune system the following 16 research and review articles in this special issue describe mechanisms of immune modification and evasion and provide an overview over the complexity of bacterial toxin interaction with different cells of the immune system

this volume offers an empirical and diachronic investigation of the foundations and nature of metaphor in english based on evidence from the historical thesaurus of english it offers case studies of a number of semantic domains and provides a significant step forward in the data driven understanding of metaphor
