bachelor thesis from the year 2017 in the subject economics finance grade 1 0 lmu munich language english abstract this thesis will concern research on causes of income inequality it asks the following question what drives income inequality at the firm level more precisely this would entail the questions what influences the development of market earnings inequality between firms understood as establishments what influences the development of market earnings inequality between firms understood as distinct corporate units i start my thesis with two recent articles that adress these questions and that employ a similar methodology to different countries the first one is a paper by david card j org heining and patrick kline card et al chk the second one is by jae song david j price fatih guvenen nicholas bloom and till von wachter song et al spg chk is concerned with firms as establishments in germany and spg with firms as corporate units in the u s both articles are concerned with more than just between firm inequality for brevities sake the parts on their other research concerns will be mentioned but not as in depth as the parts that concern between firm inequality

bachelor thesis from the year 2014 in the subject business economics investment and finance grade 1 0 texas a m university texas a m university commerce language english abstract this thesis examines optimized portfolios of three investor types during four different time intervals ranging from 1998 to 2013 to determine if the inclusion of treasury inflation protected securities tips has benefits for institutional investors such as pension plans university endowments foundations and sovereign wealth funds the three investor types used in this study differ in their risk tolerance with the more risk averse investor type choosing not to include certain asset classes in his investment portfolio the efficient frontier algorithm developed by prof harry markowitz is used to determine whether the inclusion of tips improves the risk return profile of the portfolio sharpe ratio developed by prof william sharpe is used to measure a portfolio s risk adjusted performance the study found that the benefits of the inclusion of tips in a

portfolio vary by time period and investor type while all investors were able to improve their risk return profile the more risk averse investor type benefits to a larger degree from the inclusion of tips furthermore a significant increase in the financial efficiency was only observed in the 1998 to 2002 period therefore the researcher concludes that the tips market is quite dynamic and investors need to take into account forward looking information to profit from the inclusion of tips in investment por
