inspired by the leading authority in the field the centre for process systems engineering at imperial college london this book includes theoretical developments algorithms methodologies and tools in process systems engineering and applications from the

chemical energy molecular biomedical and other areas it spans a whole range of length scales seen in manufacturing industries from molecular and nanoscale phenomena to enterprise wide optimization and control as such this will appeal to a broad readership since the topic applies not only to all technical processes but also due to the interdisciplinary expertise required to solve the challenge the ultimate reference work for years to come

this book explores the circular economy its context methodology and commercial strategies with a focus on waste minimization recycling green marketing and sustainable business practices to facilitate resource recovery it considers ir 4 0 and 5 0 to show how smart technology innovation extends circular economy through industrial organizational sustainability and investigates circular economy technology innovation in multiple scenarios to exploit product re usability and technological innovation in asian european and australian contexts it discusses novel digital technologies such as blockchain additive manufacturing ai ml and iot for global supply chain tracking this book is valuable for instructors and students in business environmental studies supply chain management product re manufacturing and marketing programs seeking cutting edge circular economy and technological innovation trends

while the pse community continues its focus on understanding synthesizing modeling designing simulating analyzing diagnosing operating controlling managing and optimizing a host of chemical and related industries using the systems approach the boundaries of pse research have expanded considerably over the years while early pse research was largely concerned with individual units and plants the current research spans wide ranges of scales in size molecules to processing units to plants to global multinational enterprises to global supply chain networks biological cells to ecological webs and time instantaneous molecular interactions to months of plant operation to years of strategic planning the changes and challenges brought about by increasing globalization and the the common global issues of energy sustainability and environment provide the motivation for the theme of pse2012 process systems engineering and decision support for the flat world each theme includes an invited chapter based on the plenary presentation by an eminent academic or industrial researcher reports on the state of the art advances in the various fields of process systems engineering addresses common global problems and the research being done to solve them

this book offers a comprehensive reference guide to operations research theory and applications in health care systems it provides readers with all the necessary tools for solving health care problems the respective chapters written by prominent researchers explain a wealth of both basic and advanced concepts of operations research for the management of operating

rooms intensive care units supply chain emergency medical service human resources lean health care and procurement to foster a better understanding the chapters include relevant examples or case studies taken together they form an excellent reference guide for researchers lecturers and postgraduate students pursuing research on health care management problems the book presents a dynamic snapshot on the field that is expected to stimulate new directions and stimulate new ideas and developments

process systems engineering for pharmaceutical manufacturing from product design to enterprise wide decisions volume 41 covers the following process systems engineering methods and tools for the modernization of the pharmaceutical industry computer aided pharmaceutical product design and pharmaceutical production processes design synthesis modeling and simulation of the pharmaceutical processing unit operation integrated flowsheets and applications for design analysis risk assessment sensitivity analysis optimization design space identification and control system design optimal operation control and monitoring of pharmaceutical production processes enterprise wide optimization and supply chain management for pharmaceutical manufacturing processes currently pharmaceutical companies are going through a paradigm shift from traditional manufacturing mode to modernized mode built on cutting edge technology and computer aided methods and tools such shifts can benefit tremendously from the application of methods and tools of process systems engineering introduces process system engineering pse methods and tools for discovering developing and deploying greener safer cost effective and efficient pharmaceutical production processes includes a wide spectrum of case studies where different pse tools and methods are used to improve various pharmaceutical production processes with distinct final products examines the future benefits and challenges for applying pse methods and tools to pharmaceutical manufacturing

this book presents a theoretical analysis of the modern methods used for modeling various chemical engineering processes currently the two primary problems in the chemical industry are the optimal design of new devices and the optimal control of active processes both of these problems are often solved by developing new methods of modeling these methods for modeling specific processes may be different but in all cases they bring the mathematical description closer to the real processes by using appropriate experimental data in this book the authors detail a new approach for the modeling of chemical processes in column apparatuses further they describe the types of neural networks that have been shown to be effective in solving important chemical engineering problems readers are also presented with mathematical models of integrated bioethanol supply chains ibsc that achieve improved economic and environmental sustainability the integration of energy and mass processes is one of the most powerful tools for creating sustainable and energy efficient production systems this book defines the main approaches for

the thermal integration of periodic processes direct and indirect and the recent integration of small scale solar thermal dryers with phase change materials as energy accumulators an exciting overview of new approaches for the modeling of chemical engineering processes this book serves as a guide for the important innovations being made in theoretical chemical engineering
