an important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition this problem is understood as how we figure out other minds relying only on indirect manifestations of other people s intentional states which are assumed to be hidden private and internal research on this question has mostly investigated how individual cognitive mechanisms achieve this task a shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes this interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds these phenomena include acting and perceiving together verbal and non verbal engagement experiences of dis connection management of relations in a group joint meaning making intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc these phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research we use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena this research topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large to

contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory
